Current evidence: mixed-method and faint-band reviews

Supplement 5. Current review evidence, 5 November 2026.

The 380 completed mixed-method reviews comprise 29 confirmed, 37 probable, 69 plausible, 235 refuted selected screening signals, 5 non-eclipse variables and 5 unresolved outcomes. Among the 66 physically confirmed or probable mixed-method cases, 19 are known recoveries, 1 retains a source-attribution hold, and 46 are accepted claims (18 confirmed, 28 probable). The held case is not counted.

The separate faint-band conjunction and raw-event search selected 2500 previously unreviewed Gaia spectroscopic binaries at G = 11.5–12 and P = 20–60 d; 2420 had QLP products in the archive inventory, and 2420 science targets had successfully downloaded data. Current download manifests contain 0 unavailable products; earlier failed attempts, including disk-floor deferrals, are archived separately. Unavailable data are not physical non-detections. All mapping failures, missing data and nonflags remain in the target-level registers. Visual triage and prior-identity checks led to 138 full physical reviews: 42 confirmed, 28 probable, 40 plausible and 25 refuted selected signals and 3 unresolved outcomes. These reviews contribute 66 accepted claims (42 confirmed, 24 probable), with known recoveries excluded. Sequential expansion and visual selection make these operational results unsuitable for unbiased occurrence or completeness estimates.

Physical confidence, source ownership, Gaia-orbit association and catalogue novelty are distinct. A selected-pattern refutation does not rule out every hidden binary. Reported recurrences are not necessarily unique orbital periods; blank ephemerides remain unresolved. Multiple reductions of the same exposures do not supply independent observing occasions, and missing or invalid coverage is not a null.

The first four volumes preserve dated evidence. This register and the current manuscript supersede historical inclusion labels. The selection and evidence archive retains all screened populations and review outcomes, including failures and nonflags. Full CSVs: mixed-method review register and faint-band review register.

Mixed-method and period-free follow-up

Confirmed (29)

TIC 352438536 | H002 | R733

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 6355981883553499776. Reported recurrence (days): 59.03.

Dated report limitations (current inclusion decision above): Period is a rounded two-complete-event estimate supported by two partial occasions, conditional on N35; no calibrated period error. Other screened shallow dips are not assigned to the same eclipse kind. The WCS/neighbor assessment is bounded and uses approximate G-to-TESS flux. Root accepts existing physical tier after controlled current catalogue recovery, bounded citation-based literature search, TOI and stated Kepler scope. No exact prior EB match; catalogue nonmatches do not prove exhaustive novelty.

Dated report next check: Obtain another complete same-kind eclipse and independent photometry for a precision ephemeris.

Full report and deciding evidence

TIC 294257329 | H022 | binary-review100-2026-11-04:H022

Included claim: False. **Novelty decision:** known_prior_recovery. Gaia DR3: 5668499078507408640. Reported recurrence (days): 32.023.

Dated report limitations (current inclusion decision above): Period and epoch are rounded local trapezoid estimates, not calibrated errors. s62 first event is partial; TESSCut and SAP share photons. Neighbor bound is bandpass and aperture dependent.

Dated report next check: Obtain independent future photometry and a precision ephemeris for publication.

Full report and deciding evidence

TIC 113645244 | H027 | R737

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 6740862492885594624. Reported recurrence (days): 41.94565.

Dated report limitations (current inclusion decision above): Local triangular-model centers/depths have no calibrated error. Gaia orbital covariance is unavailable; quoted geometry is approximate. Pixel reduction shares photons with SAP, and neighbor flux ratios use approximate G band. The broad s94 feature near 3874.6 is not assigned to this narrow eclipse kind. Root accepts existing physical tier after controlled current catalogue recovery, bounded citation-based literature search, TOI and stated Kepler scope. No exact prior EB match; catalogue nonmatches do not prove exhaustive novelty.

Dated report next check: Observe another complete narrow eclipse with resolved photometry and fit a precision clock.

Full report and deciding evidence

TIC 313617927 | H042 | binary-review100-2026-11-04:H042

Included claim: False. **Novelty decision:** known_prior_recovery. Gaia DR3: 2177341612115543424. Reported recurrence (days): 38.5.

Dated report limitations (current inclusion decision above): The result period 38.5 d is the rounded 38.5098-d separation of two measured same-kind events, not a calibrated long-baseline ephemeris. Gaia P=38.431544 d is separate orbital context. Broad eclipses lie on strong varying baselines; local centers have uncalibrated systematic errors. Pixel and aperture checks share TESS photons.

Dated report next check: Obtain an independent future event and precision timing to characterize the orbit.

Full report and deciding evidence

TIC 123365080 | T003 | R741

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 5019819103956425088. Reported recurrence (days): 48.527672.

Dated report limitations (current inclusion decision above): The two same-kind deep centers give a conditional five-cycle clock; two shallow events over 53 cycles independently agree. Long-baseline Gaia covariance is linearized. Root accepts existing physical tier after controlled current catalogue recovery, bounded citation-based literature search, TOI and stated Kepler scope. No exact prior EB match; catalogue nonmatches do not prove exhaustive novelty.

Dated report next check: Acquire another primary eclipse to sharpen the clock and orbit comparison.

Full report and deciding evidence

TIC 241629469 | T004 | R742

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 6066345094602652288. Reported recurrence (days): 38.115712.

Dated report limitations (current inclusion decision above): The sector-102 deep event contains a 0.243-d data gap; its center is inferred from surviving ingress and egress. The 0.0005-d period allowance is conservative relative to the formal fit covariance. The shallow sector-65 fit covariance is singular and its center is not precision evidence. Root accepts existing physical tier after controlled current catalogue recovery, bounded citation-based literature search, TOI and stated Kepler scope. No exact prior EB match; catalogue nonmatches do not prove exhaustive novelty.

Dated report next check: Obtain one uninterrupted deep eclipse for a cleaner center and period.

Full report and deciding evidence

TIC 281017895 | T005 | R743

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 5236562257756569856. Reported recurrence (days): 28.028754.

Dated report limitations (current inclusion decision above): Long local baseline trends affect depth and timing; the 0.0005-d period allowance exceeds the formal deep-fit scatter. QLP corrected flux suppresses the event. The TESSCut reduction reproduces it at lower dilution-dependent depth. Root accepts existing physical tier after controlled current catalogue recovery, bounded citation-based literature search, TOI and stated Kepler scope. No exact prior EB match; catalogue nonmatches do not prove exhaustive novelty.

Dated report next check: Obtain additional short-cadence eclipses with stable aperture photometry.

Full report and deciding evidence

TIC 46744354 | T006 | R744

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 2996021717990627328. Reported recurrence (days): 43.062062.

Dated report limitations (current inclusion decision above): Only two observed eclipse centers; the period allowance is driven by half-cadence timing and does not calibrate model systematics. Root accepts existing physical tier after controlled current catalogue recovery, bounded citation-based literature search, TOI and stated Kepler scope. No exact prior EB match; catalogue nonmatches do not prove exhaustive novelty.

Dated report next check: Observe a third eclipse to refine the period.

Full report and deciding evidence

TIC 466741366 | T009 | R745

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 5240845680189999104. Reported recurrence (days): 42.568962.

Dated report limitations (current inclusion decision above): A sector-37 opposite-kind center fit has singular covariance and is excluded. Sector-99 broad variability is not used as a precise eclipse center. Root accepts existing physical tier after controlled current catalogue recovery, bounded citation-based literature search, TOI and stated Kepler scope. No exact prior EB match; catalogue nonmatches do not prove exhaustive novelty.

Dated report next check: Observe another clean eclipse in each kind to improve timing and assess depth changes.

Full report and deciding evidence

TIC 323458448 | T012 | R746

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 5196935686865335296. Reported recurrence (days): 46.86672.

Dated report limitations (current inclusion decision above): The S11 deep event is partial and excluded from the precision fit. QLP corrected variants suppress the broad eclipse; period errors are conditional on selected cycle labels and uncalibrated sector systematics. Root accepts existing physical tier after controlled current catalogue recovery, bounded citation-based literature search, TOI and stated Kepler scope. No exact prior EB match; catalogue nonmatches do not prove exhaustive novelty.

Dated report next check: Acquire future raw photometry at both conjunctions to refine depths and the clock.

Full report and deciding evidence

TIC 313142904 | T014 | R747

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 5031237089847596 80. Reported recurrence (days): 49.32737.

Dated report limitations (current inclusion decision above): Formal timing error uses fit residual/cadence floor and is uncalibrated for pipeline offsets; Gaia orbit conjunction comparison is an edge-on approximation without full covariance propagation. Root accepts existing physical tier after controlled current catalogue recovery, bounded citation-based literature search, TOI and stated Kepler scope. No exact prior EB match; catalogue nonmatches do not prove exhaustive novelty.

Dated report next check: Observe another eclipse with higher spatial resolution to strengthen attribution and the ephemeris.

Full report and deciding evidence

TIC 435855781 | T074 | binary-priority100-2026-11-05:T074

Included claim: False. **Novelty decision:** known_prior_recovery. Gaia DR3: 2801675306837672704. Reported recurrence (days): 22.450616.

Dated report limitations (current inclusion decision above): Previously identified as EA/EB in Thiemann et al. 2021 SuperWASP, with erroneous 1.66-day period; this is a period revision, not a new eclipser.

Dated report next check: Update the known-system ephemeris with further timing and cite the prior EA/EB identification.

Full report and deciding evidence

TIC 33065877 | T075 | R750

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 2910877118083564416. Reported recurrence (days): 30.092022.

Dated report limitations (current inclusion decision above): Repeated two-kind eclipses are target-centered, reduction-robust and consistent with the Gaia SB2 orbit; catalogue novelty remains unverified. Root accepts existing physical tier after controlled current catalogue recovery, bounded citation-based literature search, TOI and stated Kepler scope. No exact prior EB match; catalogue nonmatches do not prove exhaustive novelty.

Dated report next check: Complete the four unavailable VizieR novelty gates before any new-system claim.

Full report and deciding evidence

TIC 398402989 | T086 | binary-priority100-2026-11-05:T086

Included claim: False. **Novelty decision:** known_prior_recovery. Gaia DR3: 6360777231720947328. Reported recurrence (days): 58.731513.

Dated report limitations (current inclusion decision above): The source is previously identified, so it is a known recovery and cannot enter a new-system count. Gaia conjunction covariance is linearly propagated from the full 15-parameter fit; nonlinear tails and orbital model systematics are not calibrated. The public dossier quotes 2.034% depth, different from the roughly 4.6-6% raw/custom-aperture depth here; the reduction or event-definition cause is untested. The fitted timing uncertainty is conditional.

Dated report next check: Cite the public Chopard v1.2.0 dossier if discussing this known recovery; refine its ephemeris with a full independent reduction if needed.

Full report and deciding evidence

TIC 200743349 | T087 | R756

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 4749907416157959424. Reported recurrence (days): 26.532911.

Dated report limitations (current inclusion decision above): The Gaia conjunction covariance is linearly propagated from the full 15-parameter fit; nonlinear tails and orbital model systematics are not calibrated. The custom aperture is the same TESS photons, not another observing occasion. A formal timing error is conditional. Root accepts existing physical tier after controlled current catalogue recovery, bounded citation-based literature search, TOI and stated Kepler scope. No exact prior EB match; catalogue nonmatches do not prove exhaustive novelty.

Dated report next check: Remeasure the eclipses in another time-series pipeline and complete the unavailable catalogue gates before any novelty claim.

Full report and deciding evidence

TIC 410314066 | T089 | binary-priority100-2026-11-05:T089

Included claim: False. **Novelty decision:** known_prior_recovery. Gaia DR3: 6448639343335797888. Reported recurrence (days): 29.74905.

Dated report limitations (current inclusion decision above): The current TESSCut aperture reuses TESS photons; its depth is not an independent observation. The local TESSCut check covers one representative event, and the period error is conditional on selected cycles and trapezoid fits. Four VizieR novelty gates remain unavailable. Exact-position VSX EA counterpart; physical evidence retained, excluded from new-system claims.

Dated report next check: Acquire an independent pipeline time series and complete the unavailable catalogue gates before any novelty claim.

Full report and deciding evidence

TIC 420645189 | T091 | binary-priority100-2026-11-05:T091

Included claim: False. **Novelty decision:** known_prior_recovery. Gaia DR3: 5480752490226077744. Reported recurrence (days): 48.533875.

Dated report limitations (current inclusion decision above): Selected-event formal timing error excludes calibration and cycle-model uncertainty. The four VizieR catalogue gates remain unavailable, but an exact published EB identification resolves novelty.

Dated report next check: No new-system claim; retain as a known EB recovery.

Full report and deciding evidence

TIC 356733570 | T096 | binary-priority100-2026-11-05:T096

Included claim: False. **Novelty decision:** known_prior_recovery. Gaia DR3: 3301800157985224704. Reported recurrence (days): 34.108492.

Dated report limitations (current inclusion decision above): The stated period uncertainty is a selected-event scatter-inflated formal value; it does not include all reduction systematics. Exact-position VSX EA counterpart; physical evidence retained, excluded from new-system claims. VSX8.51064d versus measured34.108492d remains a clock/association discrepancy, not a demonstrated fourth harmonic.

Dated report next check: No immediate physical check required in this bounded review; finish unresolved catalogue gates if novelty is needed.

Full report and deciding evidence

TIC 117404582 | T098 | R758

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 445937868709598848. Reported recurrence (days): 34.786.

Dated report limitations (current inclusion decision above): The 0.002-d allowance covers the difference between two kind-specific pair periods; it is conservative, not calibrated one-sigma precision. KSPSAP suppresses broad dips; TESScut custom aperture confirms a representative event. Root accepts existing physical tier after controlled current catalogue recovery, bounded citation-based literature search, TOI and stated Kepler scope. No exact prior EB match; catalogue nonmatches do not prove exhaustive novelty.

Dated report next check: Finish unavailable novelty catalogues before any new-system claim.

Full report and deciding evidence

TIC 29551987 | T099 | R759

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 2531745094843944 96. Reported recurrence (days): 28.791.

Dated report limitations (current inclusion decision above): The 0.001-d period allowance is conservative, not a calibrated one-sigma error. Broad baseline gaps and slopes affect the sector-73 center; lead-t099-bounds.json records actual timing coverage and the 0.05-d bound. Root accepts existing physical tier after controlled current catalogue recovery, bounded citation-based literature search, TOI and stated Kepler scope. No exact prior EB match; catalogue nonmatches do not prove exhaustive novelty.

Dated report next check: Finish unavailable novelty catalogue gates before any new-system claim.

Full report and deciding evidence

TIC 238855958 | F007 | R727

Included claim: False. **Novelty decision:** known_prior_recovery. Gaia DR3: 6391016653342250240. Reported recurrence (days): 38.193.

Dated report limitations (current inclusion decision above): Prior-known TIC 238855958: Gill et al. (2020), MNRAS 491, 1548, an F-M eclipsing binary at 38.20 d. Physical confirmed tier retained; excluded from new-system claims. S1 timing covariance is singular; reported period is rounded from multiple good later events with no formal uncertainty. Shorter-alias nulls assume similar same-kind ~7-ppt eclipses. Alternative extraction shares TESS photons.

Dated report next check: A later resolved eclipse would tighten the ephemeris.

Full report and deciding evidence

TIC 286094277 | F023 | binary-next40-2026-11-05:F023

Included claim: False. **Novelty decision:** known_prior_recovery. Gaia DR3: 2167586710592820096. Reported recurrence (days): 27.371657.

Dated report limitations (current inclusion decision above): Period precision is bounded by sector-dependent raw timing model systematics; no formal period error is adopted. Half/third phase nulls do not exclude a shallow secondary kind. TESSCut is the same TESS photons. This is the already published Tarrants-Mendes TOI-5149 exact-Gaia EB row, not a new discovery.

Dated report next check: Use independent ground-based timing only if a refined ephemeris is needed.

Full report and deciding evidence

TIC 209429773 | Q031 | R765

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 5058968452417501696. Reported recurrence (days): 42.54.

Dated report limitations (current inclusion decision above): Same-photon KSPSAP and TESSCut extractions are alternate reductions, not new observing occasions. The S31 ingress is near a 0.153-day gap and local Gaussian centers depend on baseline and morphology; the catalogue period column is rounded to 42.54 d and no precision period error is justified. Gaia G flux contrast is bandpass dependent, while the WCS evidence supplies the stronger source-location check. Root accepts existing physical tier after controlled current catalogue recovery, bounded citation-based literature search, TOI and stated Kepler scope. No exact prior EB match; catalogue nonmatches do not prove exhaustive novelty.

Dated report next check: Obtain a later clean target-centered main eclipse to refine the timing and check for an unresolved close companion.

Full report and deciding evidence

TIC 398073873 | Q043 | R766

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 5321607802863466624. Reported recurrence (days): 22.429066.

Dated report limitations (current inclusion decision above): Two similar eclipse kinds in a hypothetical 2P orbit are not excluded by photometry alone; the source-specific Gaia SB1 period supports P. Depth varies with extraction; the conditional period has no formal error. S59 is noisy. S78 broad-window pixel comparison was invalid and is not a null or localization. Novelty gates remain unavailable. Root accepts existing physical tier after controlled current catalogue recovery, bounded citation-based literature search, TOI and stated Kepler scope. No exact prior EB match; catalogue nonmatches do not prove exhaustive novelty.

Dated report next check: Obtain precision light-curve modeling and complete novelty catalogue gates before any new-system claim.

Full report and deciding evidence

TIC 143497778 | Q044 | R767

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 5531321533932247936. Reported recurrence (days): 23.400623.

Dated report limitations (current inclusion decision above): A broad orbital/tidal wave may coexist and complicates baseline/depth. Bound-hitting S61/S62 Gaussian centers limit timing precision. S34 is a trend, and S88 broad-window pixel comparison is invalid; neither is used to establish source attribution. No formal period error or primary designation is adopted. Root accepts existing physical tier after controlled current catalogue recovery, bounded citation-based literature search, TOI and stated Kepler scope. No exact prior EB match; catalogue nonmatches do not prove exhaustive novelty.

Dated report next check: Fit a physical eclipse plus orbital-wave model to the S61/S89 occasions and complete novelty gates.

Full report and deciding evidence

TIC 295176393 | Q061 | R768

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 6432623169775286656. Reported recurrence (days): 27.2545.

Dated report limitations (current inclusion decision above): No formal timing error is assigned from a local shape model. TIC flux ratios and TESS difference centroids are approximate, with bandpass and aperture uncertainty; the distant capable neighbors are disfavored rather than mathematically excluded. Novelty gates remain unresolved for this exact queue. Root accepts existing physical tier after controlled current catalogue recovery, bounded citation-based literature search, TOI and stated Kepler scope. No exact prior EB match; catalogue nonmatches do not prove exhaustive novelty.

Dated report next check: Obtain higher-angular-resolution time series or independent aperture localization to tighten source ownership and refine the orbital geometry.

Full report and deciding evidence

TIC 341419787 | Q068 | binary-next100-2026-11-05:Q068

Included claim: False. **Novelty decision:** known_prior_recovery. Gaia DR3: 5320246568758675328. Reported recurrence (days): 21.0690.

Dated report limitations (current inclusion decision above): The local Gaussian is descriptive and yields no formal period error. TIC flux ratios and clipped difference centroids are approximate; higher-resolution data could tighten ownership.

Dated report next check: Refine high-resolution source attribution and compare the observed eclipse epoch against a joint orbital fit.

Full report and deciding evidence

TIC 280051953 | Q079 | binary-next100-2026-11-05:Q079

Included claim: False. **Novelty decision:** known_prior_recovery. Gaia DR3: 4640830021527110272. Reported recurrence (days): 28.3427.

Dated report limitations (current inclusion decision above): The Gaia neighbor cone timed out, but a MAST TIC cone finds the nearest catalogued sources at 24.0/25.2 arcsec with T-band flux ratios 0.0004/0.0007, incapable of a ~35-ppt target-aperture loss even at full disappearance. Unresolved sources remain a small residual caveat. The fitted period has no formal error because event shapes and baseline differ by sector.

Dated report next check: Refine orbital geometry jointly with radial velocities and obtain high-resolution eclipse photometry to tighten source ownership.

Full report and deciding evidence

TIC 233405109 | X003 | R775

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 2186340015269024768. Reported recurrence (days): 48.58726285487076.

Dated report limitations (current inclusion decision above): Period is a representative centroid fit, with no calibrated total timing error. Covariance MC rejects unphysical eccentricity draws; edge-on conjunction is an approximation. Independent custom reduction shares photons, and unresolved companions are not excluded at TESS resolution.

Dated report next check: Obtain higher angular resolution eclipse photometry or a precision timing model if characterization is desired.

Full report and deciding evidence

Probable (37)

TIC 54494046 | H012 | R734

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 3373132589745512704. Reported recurrence (days): 58.93.

Dated report limitations (current inclusion decision above): Contact threshold alias diagnostics in partial-contact-aliases.json are not a formal ephemeris; Gaussian descriptive minima and QLP SAP depth in measured-events.json; no secure period error or primary epoch. Root accepts existing physical tier after controlled current catalogue recovery, bounded citation-based literature search, TOI and stated Kepler scope. No exact prior EB match; catalogue nonmatches do not prove exhaustive novelty.

Dated report next check: Resolve capable neighbors with multi-aperture/difference-image modeling and measure an additional complete same-kind eclipse.

Full report and deciding evidence

TIC 467963921 | H016 | R735

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 6438459789808462592. Reported recurrence (days): 49.7160.

Dated report limitations (current inclusion decision above): Descriptive raw Gaussian centers and depths in measured-events.json; no formal timing error. Root accepts existing physical tier after controlled current catalogue recovery, bounded citation-based literature search, TOI and stated Kepler scope. No exact prior EB match; catalogue nonmatches do not prove exhaustive novelty.

Dated report next check: Resolve Gaia phase/covariance and test other plausible orbital geometry; retain the measured eclipse period separate from Gaia P.

Full report and deciding evidence

TIC 224631871 | H023 | R736

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 1842411541148621312. Reported recurrence (days): 44.872.

Dated report limitations (current inclusion decision above): The photometric period is 2.85 marginal Gaia period errors shorter than 45.00439 d, with ~2.9 d absolute phase drift at s14; orbital covariance is unavailable. Gaia neighbors at 13.5 and 19.4 arcsec are flux-capable and close enough to limit attribution despite the centroid favoring target. TESSCut shares photons with SAP; no calibrated period error. Root accepts existing physical tier after controlled current catalogue recovery, bounded citation-based literature search, TOI and stated Kepler scope. No exact prior EB match; catalogue nonmatches do not prove exhaustive novelty.

Dated report next check: Deblend the close neighbors with high-resolution or simultaneous pixel photometry and test a new eclipse against both clocks.

Full report and deciding evidence

TIC 372989764 | H032 | R738

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 5923328421736888704. Reported recurrence (days): 28.24465.

Dated report limitations (current inclusion decision above): Target attribution is unresolved: Gaia DR3 5923328421736889728, G=14.81, lies 6.36 arcsec away, approximate G flux ratio 0.045, and could supply a 30 ppt blended dip with a deep intrinsic eclipse. Difference centroids 0.108 and 0.264 pixel from the target do not deblend at 0.31 pixel separation. Clock and depth are exploratory, without calibrated errors; TESSCut shares photons with QLP. The bulk fold screen attempted P=28.24275 d but did not flag it (z=1.485); this review does not establish why. Root accepts existing physical tier after controlled current catalogue recovery, bounded citation-based literature search, TOI and stated Kepler scope. No exact prior EB match; catalogue nonmatches do not prove exhaustive novelty.

Dated report next check: Obtain resolved photometry of both eclipse kinds or a calibrated pixel-level blend fit.

Full report and deciding evidence

TIC 246124257 | H046 | R739

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 5939588377656346112. Reported recurrence (days): 3.419619.

Dated report limitations (current inclusion decision above): Target attribution is limited by a capable G14.35 neighbor 32.6 arcsec away; the Gaia SB2 orbit is 42.40901 d and does not describe the 3.41962-d photometric clock. The quoted clock is exploratory with no calibrated error; the 6-ppt depth is representative. Root accepts existing physical tier after controlled current catalogue recovery, bounded citation-based literature search, TOI and stated Kepler scope. No exact prior EB match; catalogue nonmatches do not prove exhaustive novelty.

Dated report next check: Resolve the target and nearby G14.35 star during a narrow eclipse; then determine whether the 3.42-d and 42.41-d orbits form a hierarchical system.

Full report and deciding evidence

TIC 219739532 | T001 | binary-priority100-2026-11-05:T001

Included claim: False. **Novelty decision:** known_prior_recovery. Gaia DR3: 1629287395538414080. Reported recurrence (days): 28.035775.

Dated report limitations (current inclusion decision above): A Gaia neighbor 2.71 arcsec away could produce the observed loss; the TESS difference centroid cannot resolve it.

Dated report next check: Resolve the target and close Gaia neighbor with high-resolution in-eclipse imaging.

Full report and deciding evidence

TIC 92234103 | T002 | R740

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 5103589108170698752. Reported recurrence (days): 24.620831.

Dated report limitations (current inclusion decision above): Gaia conjunction differs by about 3.1 linear sigma at the old event and 2.8 sigma at the new event, despite strong photometric recurrence and target-centered pixel flux. The Gaia orbit or source association needs reconciliation. Root accepts existing physical tier after controlled current catalogue recovery, bounded citation-based literature search, TOI and stated Kepler scope. No exact prior EB match; catalogue nonmatches do not prove exhaustive novelty.

Dated report next check: Obtain radial velocities and a new eclipse to compare the 24.620831-d photometric clock with the Gaia spectroscopic orbit.

Full report and deciding evidence

TIC 341688154 | T026 | R748

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 1682702323250248704. Reported recurrence (days): 58.157443.

Dated report limitations (current inclusion decision above): Four same-kind eclipses and a tested clock, but the Gaia neighbor 6.66 arcsec away at G 12.36 could produce the diluted loss. TESScut s48 difference imaging places the deficit on their unresolved blend. Root accepts existing physical tier after controlled current catalogue recovery, bounded citation-based literature search, TOI and stated Kepler scope. No exact prior EB match; catalogue nonmatches do not prove exhaustive novelty.

Dated report next check: Resolve target versus the 6.66 arcsec neighbor with high-resolution in-eclipse imaging or spectroscopy.

Full report and deciding evidence

TIC 255912894 | T042 | R749

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 5811265337623194752. Reported recurrence (days): 47.387088.

Dated report limitations (current inclusion decision above): Capable close Gaia G=14.43 and G=16.19 neighbors are not spatially resolved from the target; source attribution remains uncertain. QLP and TESSCut use the same TESS photons. The four-center formal period error is 0.000130 d; the reported 0.0005 d is a conservative allowance for event shape and pipeline timing, not a calibrated uncertainty. Root accepts existing physical tier after controlled current catalogue recovery, bounded citation-based literature search, TOI and stated Kepler scope. No exact prior EB match; catalogue nonmatches do not prove exhaustive novelty.

Dated report next check: Resolve the blended source with higher-resolution time-series photometry or a reliable pixel localization.

Full report and deciding evidence

TIC 102069549 | T073 | binary-priority100-2026-11-05:T073

Included claim: False. **Novelty decision:** known_prior_recovery. Gaia DR3: 4933562966514402176. Reported recurrence (days): 24.592168.

Dated report limitations (current inclusion decision above): Target-centered repeated eclipses; photometric period and Gaia SB2 orbit disagree beyond their formal errors, leaving orbital association unresolved.

Dated report next check: Obtain new eclipse timing and spectroscopy to test the Gaia SB2 association.

Full report and deciding evidence

TIC 325469795 | T076 | binary-priority100-2026-11-05:T076

Included claim: False. **Novelty decision:** known_prior_recovery. Gaia DR3: 6350855788547394304. Reported recurrence (days): 26.459431.

Dated report limitations (current inclusion decision above): Deep same-kind eclipses establish a clock, but Gaia SB2 period and conjunction differ beyond formal errors. Exact-position VSX EA counterpart; physical evidence retained, excluded from new-system claims.

Dated report next check: Obtain spectroscopy and new minima to determine whether the eclipses share the Gaia SB2 orbit.

Full report and deciding evidence

TIC 414805769 | T077 | binary-priority100-2026-11-05:T077

Included claim: False. **Novelty decision:** known_prior_recovery. Gaia DR3: 2780911442064038144. Reported recurrence (days): 14.291385.

Dated report limitations (current inclusion decision above): Deep eclipses repeat at 14.291 d, nearly half Gaia 28.557 d, but twice the measured period and conjunction disagree with the Gaia formal orbit; a harmonic is unproven. Exact-position VSX EA counterpart; physical evidence retained, excluded from new-system claims.

Dated report next check: Obtain independent spectroscopy and resolved imaging to identify the eclipsing orbit.

Full report and deciding evidence

TIC 99725941 | T078 | binary-priority100-2026-11-05:T078

Included claim: False. **Novelty decision:** known_prior_recovery. Gaia DR3: 1097717538333601408. Reported recurrence (days): 44.924411.

Dated report limitations (current inclusion decision above): Two-kind target-centered eclipses recur, but measured period and Gaia SB2 conjunction disagree beyond formal errors.

Dated report next check: Time further eclipses and reconcile the Gaia spectroscopy.

Full report and deciding evidence

TIC 150429807 | T079 | R751

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 5478130253750687872. Reported recurrence (days): 44.383604.

Dated report limitations (current inclusion decision above): Many target-centered eclipses fix the photometric clock; Gaia SB2 period and conjunction are in tension at formal precision. Root accepts existing physical tier after controlled current catalogue recovery, bounded citation-based literature search, TOI and stated Kepler scope. No exact prior EB match; catalogue nonmatches do not prove exhaustive novelty.

Dated report next check: Obtain independent RVs or updated Gaia orbit, preserving the measured eclipse clock.

Full report and deciding evidence

TIC 64829183 | T080 | R752

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 2006904218754946048. Reported recurrence (days): 43.141264.

Dated report limitations (current inclusion decision above): Repeated target-centered eclipses survive alternate extraction; Gaia SB2 period and conjunction disagree, and early timing is cadence/gap limited. Root accepts existing physical tier after controlled current catalogue recovery, bounded citation-based literature search, TOI and stated Kepler scope. No exact prior EB match; catalogue nonmatches do not prove exhaustive novelty. Known VSX E neighbor at30.84arcsec has1.9066d clock, distinct from measured43.141264d. Target-centered deep alternative loss and prior neighbor flux-budget check retained; Gaia-orbit tension keeps PROBABLE.

Dated report next check: Time a complete new eclipse with independent spectroscopy to test the orbit link.

Full report and deciding evidence

TIC 37770031 | T081 | R753

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 2912271058309989376. Reported recurrence (days): 10.518241.

Dated report limitations (current inclusion decision above): The event source is localized to the target region, but an unresolved companion inside the TESS aperture remains possible. A separate short-period EB or hierarchical system is by-catch; no Gaia-orbit eclipse is established. Conditional timing error omits selection and pipeline systematics. Root accepts existing physical tier after controlled current catalogue recovery, bounded citation-based literature search, TOI and stated Kepler scope. No exact prior EB match; catalogue nonmatches do not prove exhaustive novelty.

Dated report next check: Deblend the target and nearby unresolved light, obtain a second pipeline time series, and determine whether the short-period EB belongs to the Gaia SB2 system.

Full report and deciding evidence

TIC 390155697 | T082 | R754

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 6072185425508943744. Reported recurrence (days): 16.203989.

Dated report limitations (current inclusion decision above): The local pixel check does not exclude an unresolved source or establish a physical link to the Gaia SB2. The Gaia-period association fails even though the short-period eclipse train is real. Conditional timing error omits model and reduction systematics. Root accepts existing physical tier after controlled current catalogue recovery, bounded citation-based literature search, TOI and stated Kepler scope. No exact prior EB match; catalogue nonmatches do not prove exhaustive novelty.

Dated report next check: Fit separate eclipse kinds in an independent pipeline and obtain source-resolved photometry or spectroscopy to identify the 16.204-day binary.

Full report and deciding evidence

TIC 271053559 | T083 | R755

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 5523899796082005376. Reported recurrence (days): 24.655219.

Dated report limitations (current inclusion decision above): The real on-target eclipses repeat within sector 89, yet the same ephemeris failed in earlier covered sectors. A persistent Gaia-orbit eclipse geometry or precession explanation is unproved, leaving a failed stability check and a probable verdict. Prior local investigation is not a published exact-target eclipse match; four current catalogue gates remain unknown. TESS s110/s111 are planned rather than available in the present footprint query. Root accepts existing physical tier after controlled current catalogue recovery, bounded citation-based literature search, TOI and stated Kepler scope. No exact prior EB match; catalogue nonmatches do not prove exhaustive novelty.

Dated report next check: Measure the next available sector 110/111 eclipses and compare depth and timing with the sector 89 events; obtain radial velocities of the proposed outer body.

Full report and deciding evidence

TIC 71294892 | T090 | R757

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 1108499486795034368. Reported recurrence (days): 3.2089.

Dated report limitations (current inclusion decision above): The short-period binary may be an unresolved component or a separate system within the aperture. The precise physical connection to the Gaia SB2 is unproved; the formal fit error understates profile and pipeline systematics. Root accepts existing physical tier after controlled current catalogue recovery, bounded citation-based literature search, TOI and stated Kepler scope. No exact prior EB match; catalogue nonmatches do not prove exhaustive novelty.

Dated report next check: Deblend the aperture and compare separate eclipse kinds in an independent pipeline and spectroscopy to identify the 3.209-day system.

Full report and deciding evidence

TIC 95244521 | T100 | R760

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 3038922973781177984. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Photometric recurrence is secure, but the orbital harmonic and physical relationship to the Gaia SB1 remain unresolved. The long-cycle formal timing error is inappropriate; no orbital period or error is adopted. Root accepts existing physical tier after controlled current catalogue recovery, bounded citation-based literature search, TOI and stated Kepler scope. No exact prior EB match; catalogue nonmatches do not prove exhaustive novelty.

Dated report next check: Resolve the orbital harmonic and source relation with spectroscopy or higher-resolution light curves.

Full report and deciding evidence

TIC 114244481 | N004 | binary-next10-2026-11-05:N004

Included claim: False. **Novelty decision:** pending_novelty. Gaia DR3: 3398869648691924864. Reported recurrence (days): 20.450.

Dated report limitations (current inclusion decision above): Gaia conjunction and period tension; S72 nonidentifiable timing; crowded aperture depth. Catalogue queries complete, but an IJspeert EB neighbor remains a source-specific attribution check before novelty acceptance. No new claim.

Dated report next check: Independent precise event centers and Gaia-orbit reconciliation.

Full report and deciding evidence

TIC 269900850 | N005 | R761

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 5188361214155595904. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Integer aliases and broad-fit timing unresolved; raw trends/gaps vary depths. Newly available S93 cutout has near-zero target flux (~0.65 units), invalid for a null. Root accepts existing physical tier after controlled current catalogue recovery, bounded citation-based literature search, TOI and stated Kepler scope. No exact prior EB match; catalogue nonmatches do not prove exhaustive novelty.

Dated report next check: Get a sensitive intermediate same-kind eclipse; re-extract a usable S93 product if available.

Full report and deciding evidence

TIC 62374377 | N008 | R762

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 6663937601390353792. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Orbital cycle count and Gaia association unresolved; S105 is a raw TESSCut reduction of new photons, not a QLP light curve. Root accepts existing physical tier after controlled current catalogue recovery, bounded citation-based literature search, TOI and stated Kepler scope. No exact prior EB match; catalogue nonmatches do not prove exhaustive novelty.

Dated report next check: Targeted fourth occasion or intervening eclipse to resolve integer clock and Gaia relationship.

Full report and deciding evidence

TIC 325817130 | N010 | R763

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 5852028116387049344. Reported recurrence (days): 56.823.

Dated report limitations (current inclusion decision above): Capable G12.04 neighbor not fully PRF-deblended; corrected columns suppress long raw events. S102 new cutout has no finite target-flux cadences and cannot yield a null. Root accepts existing physical tier after controlled current catalogue recovery, bounded citation-based literature search, TOI and stated Kepler scope. No exact prior EB match; catalogue nonmatches do not prove exhaustive novelty. Known VSX E neighbor at31.38arcsec has0.54877d clock, distinct from56.823d two-kind recurrence. Target-favored pixels do not uniquely deblend capable close neighbor; PROBABLE ownership caveat retained.

Dated report next check: PSF deblending and joint two-kind fit for secure ownership and depth.

Full report and deciding evidence

TIC 219345200 | F002 | R725

Included claim: False. **Novelty decision:** known_prior_recovery. Gaia DR3: 4785405080341786368. Reported recurrence (days): 59.919.

Dated report limitations (current inclusion decision above): Prior-known TIC 219345200 / Gaia DR3 4785405080341786368: Zwintz et al. (2026) explicitly identify an eclipsing binary, citing Beck et al. (2024); also TOI-706. The published 65-day period differs from our approximate 59.919-day recurrence. That discrepancy and source ownership remain unresolved; physical probable tier retained, excluded from new-system claims. Real repeated eclipses and compatible Gaia geometry; close capable or near-capable neighbor prevents firm source ownership. Period is approximate from representative raw centers, not a calibrated ephemeris error.

Dated report next check: Obtain higher-resolution eclipse photometry or a multi-pixel PSF fit across separate events.

Full report and deciding evidence

TIC 450652458 | F006 | R726

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 6058134762093029632. Reported recurrence (days): 39.44.

Dated report limitations (current inclusion decision above): Crowding, sloping baselines and uncertain broad-event centers limit source ownership and period precision. No formal error is inferred from provisional trapezoid fits.

Dated report next check: Obtain a clean fully covered next trough with spatial difference imaging and a second extraction.

Full report and deciding evidence

TIC 339023379 | F008 | binary-next40-2026-11-05:F008

Included claim: False. **Novelty decision:** known_prior_recovery. Gaia DR3: 5971649891874353536. Reported recurrence (days): 50.0.

Dated report limitations (current inclusion decision above): Partial events and possible morphology changes limit unique photometric cycle proof and prevent a precision period error; the VSX clock is corroboration, not the source of a claimed measured eclipse period.

Dated report next check: Get another complete deep and shallow occasion to refine the photometric clock.

Full report and deciding evidence

TIC 458324895 | F010 | R728

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 6019522147114455936. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Real repeated broad eclipses have unresolved integer aliases; no measured orbital period is adopted. S39/S66 incomplete baselines and same-photon alternative extraction limit depth and source precision.

Dated report next check: Observe a deep eclipse at a discriminating intermediate cycle and repeat target-centered pixels.

Full report and deciding evidence

TIC 236223193 | F014 | R729

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 1869679326451426816. Reported recurrence (days): 35.239.

Dated report limitations (current inclusion decision above): The target owns the recurring photometric dips, but the Gaia SB2 orbital association and source-specific conjunction geometry are unresolved. Local fit covariances understate long-baseline timing scatter; the approximate period has no defensible formal error yet.

Dated report next check: Obtain source-specific RV/conjunction timing and independent photometry, then reconcile the 35.239 d eclipse clock with the Gaia 35.3747 d SB2 orbit.

Full report and deciding evidence

TIC 28059397 | F017 | R730

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 1880201446555350272. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The partial third occasion supports recurrence but its missing center leaves kind and orbital period conditional; no precise period or epoch is adopted. QLP KSPSAP is absent for S56/S83; fresh TESSCut provides a spatial alternative extraction of the same photons, not another observing occasion.

Dated report next check: Measure a complete next event in an independent pipeline and compare separate eclipse-kind recurrence with source-specific Gaia conjunction timing.

Full report and deciding evidence

TIC 324424395 | F022 | binary-next40-2026-11-05:F022

Included claim: False. **Novelty decision:** known_prior_recovery. Gaia DR3: 6415022359433384576. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The bounded BLS does not settle nearby long-baseline integer aliases or establish a precision primary timing, so no orbital period or epoch is adopted. Gaia SB1 period 27.751345 d differs from the diagnostic raw clock, and the S39 measured deep event is +0.836 d from the nearest source-specific Gaia conjunction versus 0.189 d linear covariance. Local trapezoids hit bounds or are gap affected. QLP corrected flux suppresses the long eclipses; the TESSCut extraction uses the same photons. ASAS-SN ROT conflicts with the near-identical VSX ESD identification. Pixel centroid is offset by baseline/gap effects and is not precision localization.

Dated report next check: Obtain an independent pipeline or follow-up eclipse timing and reconcile the Gaia SB1 phase; treat as a known VSX EB recovery.

Full report and deciding evidence

TIC 19385783 | F028 | R731

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 3062493586800148992. Reported recurrence (days): 2.065942.

Dated report limitations (current inclusion decision above): The sector-34 TESSCut difference image is inconclusive for ownership because an unrelated excess biases its centroid. Gaia SB1 P35.0856 d is not the measured dip recurrence and its conjunction is 0.231 phase away at S34; the orbital relationship is unresolved. The physical orbit might be an integer multiple of the observed dip cadence; the reported clock is a photometric recurrence, with no defensible period error.

Dated report next check: Obtain a clean difference image or ground-based resolved photometry and test the Gaia orbit versus a separate short-period binary.

Full report and deciding evidence

TIC 51321183 | F032 | R732

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 5755352452627474176. Reported recurrence (days): 16.8905.

Dated report limitations (current inclusion decision above): The photometric clock is a rounded blended-aperture recurrence, not an established orbit of the Gaia target. Fresh WCS pixels have valid target flux but a capable G13.015 neighbor only 0.36 pixel from the target; local drift moves the difference centroid off both positions. Source ownership is unresolved. Gaia SB1 P38.46865 d is incompatible with the observed 16.89-d clock; no source-specific conjunction tie is claimed. Local formal timing errors omit systematics, so no period error is supplied.

Dated report next check: Obtain resolved target and neighbor photometry at another predicted sharp eclipse, then establish source ownership and orbital association.

Full report and deciding evidence

TIC 246892556 | Q011 | R764

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 2319058524800146944. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Orbital period, eclipse kind, target ownership, and compatibility with the Gaia SB2 orbit are unresolved; no precision period or primary epoch is adopted. Root accepts existing physical tier after controlled current catalogue recovery, bounded citation-based literature search, TOI and stated Kepler scope. No exact prior EB match; catalogue nonmatches do not prove exhaustive novelty.

Dated report next check: Obtain resolved photometry or source-specific PSF difference fitting for the 21.74-arcsec neighbor, then test 6.557 versus 13.114 d and conjunction geometry.

Full report and deciding evidence

TIC 295351347 | Q078 | R769

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 5877803074100848640. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): A repeated eclipse-like signal is real, but close-source ownership and orbital-cycle/harmonic interpretation remain unresolved. Root accepts existing physical tier after controlled current catalogue recovery, bounded citation-based literature search, TOI and stated Kepler scope. No exact prior EB match; catalogue nonmatches do not prove exhaustive novelty. Known VSX E neighbors at37.23/55.16arcsec have1.58694/.75504d clocks, distinct from observed~.693052d. Exact target variable has no EB type. PROBABLE blended-source and harmonic/orbit caveats retained.

Dated report next check: Use higher-resolution or multi-aperture eclipse localization to separate the target from capable neighbors.

Full report and deciding evidence

TIC 3299934 | Q095 | R770

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 5430344035305587584. Reported recurrence (days): 21.02752.

Dated report limitations (current inclusion decision above): Repeated real eclipses are supported; definitive source attribution and Gaia association remain unresolved. Catalogue novelty remains unknown. Root accepts existing physical tier after controlled current catalogue recovery, bounded citation-based literature search, TOI and stated Kepler scope. No exact prior EB match; catalogue nonmatches do not prove exhaustive novelty.

Dated report next check: Obtain spatially resolved eclipse photometry and a covariance-aware Gaia conjunction test.

Full report and deciding evidence

TIC 378411251 | X004 | R776

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 5253057062489834240. Reported recurrence (days): 3.19139.

Dated report limitations (current inclusion decision above): Unresolved neighbor remains possible because complete capable-neighbor cone queries failed. Same-kind versus opposite-kind doubling and long-baseline ephemeris have not been resolved. DSCT/GDOR/SXPHE catalogue variability does not itself explain these sharp deficits.

Dated report next check: Resolve close blends and obtain repeated independent source photometry; fit both eclipse kinds before assigning orbital period.

Full report and deciding evidence

Plausible (69)

TIC 277891015 | H005 | binary-review100-2026-11-04:H005

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6353362709418035200. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Eclipse shape, recurrence, period and source attribution are insecure; 206 other-CCD flags are a common-mode hint only.

Dated report next check: Recover a clean second event with usable pre/post baseline, then test pixel attribution.

Full report and deciding evidence

TIC 268385893 | H006 | binary-review100-2026-11-04:H006

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 2085661515089271168. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): This disfavors repetition at that assumed Gaia phase, but the single trough is not securely classified; another period or non-eclipse variability remains possible. No event depth or timing precision is claimed.

Dated report next check: Seek another isolated narrow trough and test its period before source attribution.

Full report and deciding evidence

TIC 322217134 | H008 | binary-review100-2026-11-04:H008

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 2635952928569503232. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Two-event cycle count remains untested by an independent clean occasion; no established period or precision epoch in result row. Source attribution is supported but lacks full PRF deblend.

Dated report next check: Observe a complete third same-kind event to settle cycle count and timing; deblend if publication depends on attribution.

Full report and deciding evidence

TIC 231694897 | H013 | binary-review100-2026-11-04:H013

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6458496052761193856. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Single insecure event; no period, epoch, or depth fit. Missing-sector receipts and local-background TESSCut measurements in missing-cutout-review.json; s103/s1 unusable.

Dated report next check: Obtain an independent s94 pixel extraction and a new raw observing occasion if the source remains of interest.

Full report and deciding evidence

TIC 323818250 | H019 | binary-review100-2026-11-04:H019

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5203021415006207744. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): No measured eclipse period, epoch, or depth. Missing-sector receipts and unusable local-background TESSCut diagnostics in missing-cutout-review.json.

Dated report next check: If additional photometry becomes available, verify the s11 shape through an alternate extraction and target pixel attribution.

Full report and deciding evidence

TIC 299187993 | H021 | binary-review100-2026-11-04:H021

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5865636118916411008. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Recurring eclipse and target attribution remain insecure; the two difference positions do not establish a shared source. No precision period, epoch, or depth assigned.

Dated report next check: Obtain resolved/difference-image photometry for a complete future event and compare the nearby bright star.

Full report and deciding evidence

TIC 454228598 | H039 | binary-review100-2026-11-04:H039

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5873154098409671296. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): A single event near sector start could be a real eclipse or startup/systematic. A Gaia G=13.72 source 5.96 arcsec away is flux-capable at approximate G flux ratio 0.053; WCS/aperture evidence does not locate the source. No period, epoch or depth is promoted to a system measurement.

Dated report next check: Obtain a complete repeat with pre- and post-event baseline and resolved photometry.

Full report and deciding evidence

TIC 101107570 | H047 | binary-review100-2026-11-04:H047

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5710279386492436864. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The shallow events are near the raw noise and changing baseline, so the eclipse interpretation is insecure; this is not a physical null on the SB1 star.

Dated report next check: Acquire a continuous high signal-to-noise conjunction light curve and check difference pixels if a coherent event appears.

Full report and deciding evidence

TIC 368903210 | H066 | binary-review100-2026-11-04:H066

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 1952811334743127O4. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): One insecure shallow event; corrected suppression, pointing association, and weak new-sector coverage cannot decisively attribute or reject it.

Dated report next check: Obtain a stable, source-localized repeat and independent aperture reduction before measuring an ephemeris.

Full report and deciding evidence

TIC 321154190 | H067 | binary-review100-2026-11-04:H067

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6341690981173235968. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Gap, centroid association, and varying baseline prevent a secure eclipse measurement, but do not positively refute every possible event.

Dated report next check: Recover a clean uninterrupted repeat and test its position and alternate aperture against the target WCS.

Full report and deciding evidence

TIC 423569223 | H072 | binary-review100-2026-11-04:H072

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 3515053500504454784. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): One possible event, no measured same-kind repeat, ambiguous cycle count and source attribution.

Dated report next check: Obtain a continuous future event and difference-pixel localization; then test integer-cycle aliases.

Full report and deciding evidence

TIC 317718737 | H094 | binary-review100-2026-11-04:H094

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 2991561068038075904. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Shallow two-occasion dips; timing aliases, source and pixel attribution unresolved.

Dated report next check: Localize the s33/s87 depressions, measure their centers and test integer aliases against newer coverage before assigning an orbital period.

Full report and deciding evidence

TIC 390853987 | H100 | binary-review100-2026-11-04:H100

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 466214478035295744. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): One isolated candidate dip; screened period contradicted by an observed null; source unverified.

Dated report next check: Localize the s86 deficit with background-controlled difference pixels and capable neighbors, then seek another observing occasion and test integer-cycle aliases.

Full report and deciding evidence

TIC 142761762 | T007 | binary-priority100-2026-11-05:T007

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5717517231026236160. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Broad dips ride changing baseline slopes; S34 and S61 have missing ingress or baseline, so centers are not precise. The 18/19/20-cycle interpretations of the long separation all predict the roughly third-spaced partial occasions. A narrow deep event occurs only in S88. New S109 has changing baseline and edge windows, not a decisive alias test.

Dated report next check: Observe an uninterrupted shallow and deep eclipse pair to establish morphology, source and integer cycle count.

Full report and deciding evidence

TIC 37647565 | T008 | binary-priority100-2026-11-05:T008

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5647673503647610752. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): One broad raw event has a central 1.6-d gap, so its center and depth are not secure. The sector-62 TESSCut is on a zero-pixel detector edge and cannot test the source. New sector 109 is flat only in BTJD 4318.56–4338.74.

Dated report next check: Get a target-centered alternative reduction and another eclipse occasion.

Full report and deciding evidence

TIC 313275336 | T024 | binary-priority100-2026-11-05:T024

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 1124063932878885888. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The s26 ~6 ppt dip near 2033.5 is shallow on a changing baseline; a second nearby screen dip does not establish recurrence. KSPSAP suppresses it, which alone is not a refutation.

Dated report next check: Acquire an independent event or useful later-sector coverage and a pixel-level source check.

Full report and deciding evidence

TIC 219765764 | T025 | binary-priority100-2026-11-05:T025

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 1632993333840700032. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): s79 has an ingress and flat bottom but egress is in a data gap. Other selected troughs often end at downlink gaps and do not form one Gaia-period clock. s77 and s86 current cutouts have negligible target flux, so neither supplies a recurrence null.

Dated report next check: Obtain a clean same-kind repeat and a higher-resolution source check.

Full report and deciding evidence

TIC 362778566 | T033 | binary-priority100-2026-11-05:T033

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 4150864344306232960. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The s80-to-s91 separation is conditional on five Gaia cycles; n=3/4/5 remain untested. s92 flat core coverage contradicts n=6/9 and disfavors n=8 under the assumed phase, duration and depth; n=8 has only partial core coverage (424 cadences, first offset -0.383 d for a +/-0.6 d core), n=7 falls in a gap, and n=10 is at a sector-start low state. The s80 WCS target has flux, but nearby sources remain a source-attribution limit.

Dated report next check: Capture a fully bracketed repeat in a future sector and resolve the 18.8 arcsec G=14.89 neighbor with event difference imaging or higher-resolution photometry.

Full report and deciding evidence

TIC 237212952 | T036 | binary-priority100-2026-11-05:T036

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 2263930420533693568. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): One sector contains several broad changing-baseline troughs but no supported Gaia-period timing or secure repeat. The quick TESScut has a cropped zero-valued half; its aperture statistic is invalid and cannot act as an independent null or source localization.

Dated report next check: Obtain a fully bracketed same-kind return and a valid spatial difference image with a stable local baseline.

Full report and deciding evidence

TIC 21743048 | T043 | binary-priority100-2026-11-05:T043

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 1338435641930684672. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Only one insecure event at the selected phase, no measured clock, and an edge cutout with severe baseline drift. The S25 fold null constrains the fold-screen signal only.

Dated report next check: Obtain a stable pixel extraction and another observing occasion at an event-derived prediction.

Full report and deciding evidence

TIC 319604640 | T045 | binary-priority100-2026-11-05:T045

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6638959823942182528. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The S67 local feature is not positively ruled out; pixel extraction shares the photons and does not establish a new observing occasion. Other broad dips cannot be promoted to repeats.

Dated report next check: Acquire a repeated, isolated eclipse with clean pre/post baseline and then localize it.

Full report and deciding evidence

TIC 269941080 | T050 | binary-priority100-2026-11-05:T050

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6806491242436158592. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): S27 may be a real single event, broad variability or extraction systematics. The cutout shares TESS photons and cannot decide the cause; S92 predicted coverage is absent.

Dated report next check: Obtain an independent observing occasion with complete ingress and egress coverage.

Full report and deciding evidence

TIC 280963520 | T057 | binary-priority100-2026-11-05:T057

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5409169159350357248. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Short-period variability, potentially a short-period eclipsing by-catch, has no secure source attribution or established orbital/eclipse kind. A raw s9 TESSCut pixel extraction is dominated by a sawtooth trend and does not validate the QLP depression. It does not establish an eclipse on the 32.95-d Gaia spectroscopic period. New s99 coverage exists, but that official TESSCut 5x5 target footprint has effectively zero flux and is not a sensitive recurrence test.

Dated report next check: Obtain calibrated target-pixel photometry to test 0.37530/0.75060-d aliases and locate the variable source.

Full report and deciding evidence

TIC 405542204 | T059 | binary-priority100-2026-11-05:T059

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 1353525240727718016. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): A long eclipse remains possible. No complete same-kind repeated ingress/egress pair, secure cycle count, source attribution or geometry has been established; the raw pixel extraction shares TESS photons.

Dated report next check: Obtain calibrated target-centered pixel photometry across the s25/s26 boundary and a future predicted interval to establish whether a localized eclipse repeats.

Full report and deciding evidence

TIC 198415716 | T062 | binary-priority100-2026-11-05:T062

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 1434045294727818880. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The event center, source and repeat period are insecure; the s24 baseline is strongly variable.

Dated report next check: Test a future clean raw notch and locate it in difference pixels before fitting an eclipse period.

Full report and deciding evidence

TIC 220716821 | T063 | binary-priority100-2026-11-05:T063

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5355830682067401344. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Morphology is insecure against the brightening baseline; no repeat or source attribution is established.

Dated report next check: Obtain a bracketed repeated raw dip and target-centered difference image.

Full report and deciding evidence

TIC 39019899 | T065 | binary-priority100-2026-11-05:T065

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 4690111300916173184. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): One incompletely bracketed shallow event; center, recurrence and source attribution are unresolved.

Dated report next check: Obtain a fully bracketed raw repeat and target-centered pixel deficit before fitting a period.

Full report and deciding evidence

TIC 255761037 | T067 | binary-priority100-2026-11-05:T067

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5501675122732638976. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Low signal-to-noise single feature; source attribution and recurrence are unresolved.

Dated report next check: Require a cleaner repeated raw deficit with a measured center and valid source pixels.

Full report and deciding evidence

TIC 159851783 | T069 | binary-priority100-2026-11-05:T069

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 4610838952095181952. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Aperture variation is supported; eclipse morphology, timing centers and source attribution are insecure. Broad sector trends can mimic phase agreement.

Dated report next check: Locate s25/s26/s52 deficits with convincing target-versus-background difference pixels and obtain a clean, bracketed repeat.

Full report and deciding evidence

TIC 160179511 | T070 | binary-priority100-2026-11-05:T070

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 4820577220362873728. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The original notch is shallow and only partially bracketed, with no established same-kind recurrence; s108 extraction cannot test the predicted phase.

Dated report next check: Obtain target-flux-valid photometry at a future conjunction and difference pixels for a securely bracketed dip.

Full report and deciding evidence

TIC 91548233 | T071 | binary-priority100-2026-11-05:T071

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 887897592669930752. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): One shallow selected feature is embedded beside a much larger brightening; no secure repeat or eclipse midpoint.

Dated report next check: Acquire a target-resolved light curve of a future narrow event and establish recurrence.

Full report and deciding evidence

TIC 87869692 | T084 | binary-priority100-2026-11-05:T084

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 882872210352301568. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Only two secure same-kind centers exist; the principal Gaia-near alias and two shorter aliases remain untested by actual coverage. Saturation limits pixel attribution. The footprint lists an unusual s1751 record without a usable cached light curve; it is not counted as a confirming sector.

Dated report next check: Obtain a fully covered same-kind repeat and saturation-aware difference image, then resolve the integer-cycle alias.

Full report and deciding evidence

TIC 287035536 | T088 | binary-priority100-2026-11-05:T088

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 1241798366670426112. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The two events have very different depths, are at different Gaia phases and are not securely attributed to one source or eclipse kind. There is no measured repeating period. The Gaia-neighbor flux ratio is only an approximate screening bound.

Dated report next check: Use source-resolving difference/PSF photometry for both events and obtain another same-kind eclipse before testing cycle aliases.

Full report and deciding evidence

TIC 212431520 | T092 | binary-priority100-2026-11-05:T092

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 4230027841458799744. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The first sector-81 event has a bright Gaia neighbor 35.8 arcsec away. Its positive difference moment lies 0.047 pixel from the target and 1.65 pixels from that neighbor, favoring the target without a calibrated PRF fit. No same-kind recurrence or secure clock.

Dated report next check: Obtain another target-resolved event to determine which eclipse kind repeats and its period.

Full report and deciding evidence

TIC 411613581 | T093 | binary-priority100-2026-11-05:T093

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6071540355782662400. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The integer cycle count and an eclipse-derived orbital period remain unresolved. The sector-10 partial state cannot time a cycle. QLP KSPSAP suppresses the long event; the independent TESScut aperture recovers it.

Dated report next check: Measure another full deep eclipse or obtain an independent period constraint. The 56.25114-d value remains conditional only.

Full report and deciding evidence

TIC 293344008 | T094 | binary-priority100-2026-11-05:T094

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 2741255699783938944. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The long gap leaves the orbital period and Gaia orbit association insecure. Tesscut currently lists only sectors 42, 43 and 70; there is no later available sector.

Dated report next check: Measure a third same-kind eclipse or get an independent period constraint.

Full report and deciding evidence

TIC 321441717 | T095 | binary-priority100-2026-11-05:T095

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 762660606926162432. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The two deep occasions do not uniquely fix the cycle count. The shallow eclipse is 3.47 Gaia linear-sigma from nominal opposite conjunction, so Gaia-orbit association remains insecure. KSPSAP suppresses long dips; TESScut recovers one.

Dated report next check: Measure another deep eclipse to establish the clock and test Gaia association.

Full report and deciding evidence

TIC 29510249 | T097 | binary-priority100-2026-11-05:T097

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5331628678768826624. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The sector-89 shallow event is partly gapped and cannot supply a precision midpoint. Sector 62 is an unusable negative-target-pixel cutout, not a null. Orbital period and Gaia association are not established.

Dated report next check: Time an additional fully covered primary to distinguish neighboring cycle counts.

Full report and deciding evidence

TIC 284268629 | N001 | binary-next10-2026-11-05:N001

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 1587225372059609472. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Integer aliases untested; second-sector pixel localization and independent pipeline remain limited.

Dated report next check: Acquire a third primary eclipse or archival non-QLP event at a discriminating cycle.

Full report and deciding evidence

TIC 318209162 | N006 | binary-next10-2026-11-05:N006

Included claim: False. **Novelty decision:** known_prior_recovery. Gaia DR3: 1018729069670619520. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Only two observed primary occasions and neighboring integer aliases untested photometrically. Historical report is reused with provenance, not silently imported as a new verdict.

Dated report next check: Third primary eclipse at a cycle distinguishing N=28/29/30; consult the prior review cited in the full report.

Full report and deciding evidence

TIC 82550215 | N007 | binary-next10-2026-11-05:N007

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 1339336932228114944. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): No third same-kind occasion or independent period; second-sector pixel test is limited.

Dated report next check: Observe a third primary at a discriminating alias epoch.

Full report and deciding evidence

TIC 85368955 | F003 | binary-next40-2026-11-05:F003

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 492733976939952896. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Only one secure deep event, no measured orbital clock, and close source attribution unresolved. Oscillatory minima are not counted as repeat eclipses.

Dated report next check: Obtain another deep event with a resolved WCS/PSF source measurement.

Full report and deciding evidence

TIC 150358763 | F012 | binary-next40-2026-11-05:F012

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5481501665639174784. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Eclipse interpretation, event kind, source and cycle count remain insecure. The S3 sector is available but absent from the cached QLP set.

Dated report next check: Inspect S3 and obtain target-centered pixels at a clean future deep event; compare clock hypotheses only after measured repeat centers.

Full report and deciding evidence

TIC 458457983 | F013 | binary-next40-2026-11-05:F013

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 3727849785488193408. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Two sparse events do not fix a cycle count; S50 source attribution and precise centers remain insecure.

Dated report next check: Capture another narrow event with high-cadence target and neighbor photometry, then test adjacent integer aliases.

Full report and deciding evidence

TIC 161826828 | F016 | binary-next40-2026-11-05:F016

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 1623396379739607680. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Eclipse kinds, source and aliases are unresolved; S52 is available but uncached. QLP KSPSAP is absent for S85.

Dated report next check: Inspect S52 and obtain clean background-subtracted target/neighbor pixel photometry around the two S85 troughs.

Full report and deciding evidence

TIC 64696566 | F027 | binary-next40-2026-11-05:F027

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5609502995422286592. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): A contact binary or ellipsoidal interpretation remains possible, but spots/pulsation or a multi-period signal is not excluded. The 1.2609-d diagnostic is not an adopted orbital period. No isolated same-kind eclipse timing or Gaia orbital geometry link exists.

Dated report next check: Obtain multicolor/high-cadence photometry or radial velocities to distinguish a contact/ellipsoidal binary from non-eclipse variability.

Full report and deciding evidence

TIC 355789639 | F033 | binary-next40-2026-11-05:F033

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 4714307359954109696. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The partial S28 signal may be an eclipse, but its depth and center are not securely measured and source attribution is untested for that event. KSPSAP attenuation on the same photons does not by itself refute it.

Dated report next check: Inspect valid source-centered pixels or another complete deep event and then test integer-cycle aliases.

Full report and deciding evidence

TIC 369760020 | F038 | binary-next40-2026-11-05:F038

Included claim: False. **Novelty decision:** known_prior_recovery. Gaia DR3: 6736265400436021376. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Only two sparse broad events were measured; the width-bound local fits provide no precision timing error. The Gaia SB1 P41.0497 d resembles one conditional alias but does not prove it or source-specific conjunction geometry. The near-exact VSX identity is known prior evidence, not novelty.

Dated report next check: Measure a third deep occasion or obtain historical light-curve timings with source-resolved pixels, then test adjacent integer cycles and Gaia conjunction.

Full report and deciding evidence

TIC 72747845 | Q002 | binary-next100-2026-11-05:Q002

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5116265446446549120. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The eclipse interpretation, clock and target-specific geometry remain insecure. KSPSAP strongly suppresses several S3 minima on the same photons, which alone cannot refute raw variability.

Dated report next check: Acquire a distinct source-centered eclipse with stable morphology and a measured clock; test actual aliases and capable neighbors.

Full report and deciding evidence

TIC 1535458 | Q005 | binary-next100-2026-11-05:Q005

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 4875254662302883712. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Broad center estimates and widths do not establish a unique same-kind clock. Orbital/periastron modulation and baseline effects remain alternatives. A brighter source about five pixels away and unresolved close neighbors limit ownership; S98 background varies sharply. Same-photon KSPSAP suppression is not an independent physical refutation.

Dated report next check: Obtain a clean full event with source-resolved pixels and test aliases and Gaia conjunction geometry.

Full report and deciding evidence

TIC 267022733 | Q009 | binary-next100-2026-11-05:Q009

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6496414669750098176. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Gap-edge systematics are a credible alternative but the available evidence does not positively refute a real eclipse. No period or depth is adopted.

Dated report next check: Catch a complete isolated event with both baselines and valid source-resolved pixels.

Full report and deciding evidence

TIC 264612788 | Q023 | binary-next100-2026-11-05:Q023

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 458379014584350592. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Individual dips might contain real eclipses, so the binary interpretation remains insecure rather than positively refuted. The selection Gaia period is not an event-derived clock.

Dated report next check: Obtain an isolated full repeated dip with stable shape and test integer-cycle aliases.

Full report and deciding evidence

TIC 70887357 | Q025 | binary-next100-2026-11-05:Q025

Included claim: False. **Novelty decision:** known_prior_recovery. Gaia DR3: 5096613016130459136. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Exact Gaia identity is already a published EB alert (Tarrants and Mendes Table 2) and appears in Chopard v1.2.0; novelty is known. This bounded two-occasion review does not by itself validate the selected dips as that published eclipse clock. Unresolved close neighbors remain possible.

Dated report next check: Recover the published ephemeris and a third target-localized event; check Gaia conjunction geometry and cycle aliases.

Full report and deciding evidence

TIC 94255849 | Q027 | binary-next100-2026-11-05:Q027

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5368647379859461504. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Two clean target-position occasions and a compromised third leave unresolved subpixel neighbors, remaining integer aliases and orbital conjunction geometry.

Dated report next check: Obtain a third complete target-localized dip or further sensitive alias nulls, then test Gaia conjunction geometry.

Full report and deciding evidence

TIC 172615355 | Q046 | binary-next100-2026-11-05:Q046

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6002929902484820992. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): One on-target eclipse-like occasion remains; alternative variability or aperture effects cannot yet be ruled out. No supported orbital period, eclipse kind, or sensitive recent null is measured.

Dated report next check: Obtain valid target photometry at a predicted recurrence, or resolved WCS differences for a second same-kind event.

Full report and deciding evidence

TIC 96270957 | Q047 | binary-next100-2026-11-05:Q047

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5921382045628109312. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The S93 extraction discrepancy and source ownership remain unresolved. A single eclipse-like occasion could be target, neighbor, or reduction artifact; no period or depth is adopted.

Dated report next check: Use resolved pixel or PSF photometry around S93 to determine source ownership and explain the QLP aperture discrepancy.

Full report and deciding evidence

TIC 373314632 | Q051 | binary-next100-2026-11-05:Q051

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 3289139045369149696. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The S32 partial rise and S98 full raw trough are not established as a repeating eclipse kind; integer aliases remain unresolved, and target/neighbor ownership is uncertain. Neither depth nor adopted period is assigned. The official MAST TESSCut coordinate coverage endpoint, queried on 2026-11-05 and saved in lead-sector-availability.json, lists only S5/S32/S98, all already cached; this is availability, not a null. `lead-phase-followup.json/png` gives the projected phase and approximate egress intervals; `lead-startup-controls.json/png` records the same-CCD comparison and hashes. The helper WCS/Gaia artifacts give independent source details.

Dated report next check: Obtain a later full event with resolved target/neighbor difference photometry and test the 49/50/51-cycle alternatives.

Full report and deciding evidence

TIC 219377638 | Q062 | binary-next100-2026-11-05:Q062

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 4771504916903975296. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The S13 trough could be an eclipse or another transient/extraction feature; source ownership and recurrence remain unproved. The alternate reduction uses the same photons. Current availability could not be established from the inconsistent TESSCut endpoint.

Dated report next check: Acquire a second complete matching dip with stable baseline and localized pixels.

Full report and deciding evidence

TIC 72497715 | Q075 | binary-next100-2026-11-05:Q075

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6132828748796295040. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): These could be eclipses from a nearby source or structured/systematic variability; same-sector recurrence and fractional-pixel centroids do not settle that.

Dated report next check: Resolve the bright TIC neighbors with higher-resolution time-series photometry and obtain a second-sector target-centered difference image at a predicted same-kind event.

Full report and deciding evidence

TIC 99243741 | Q080 | binary-next100-2026-11-05:Q080

Included claim: False. **Novelty decision:** known_prior_recovery. Gaia DR3: 2928006581543570560. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Final adversarial adjudication: only two continuously sampled troughs securely support the interpretation, with untested same-kind cycle count; gapped later depressions and prior VSX identity do not resolve it. S7/S34 centers are approximate local fits, with shape and baseline systematics rather than formal timing errors. S87 ingress and S88 egress are gapped, and their timing cannot resolve P versus 2P. The VSX 65.8-d and Gaia 33.38-d clocks differ, and an orbital harmonic remains possible. Difference images are not a formal PRF fit.

Dated report next check: Fit complete target-centered eclipses over independent sectors and test both 33.38-d and 65.8-d alias families.

Full report and deciding evidence

TIC 191416124 | Q083 | binary-next100-2026-11-05:Q083

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 3874238183803964l6. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Eclipse-like troughs survive, but their source, eclipse versus oscillation interpretation, same-kind cycle count and Gaia association remain unsettled. MAST availability on 2026-11-05 returned only the three cached sectors. No period, epoch, formal error or depth is adopted. Novelty gates remain unresolved.

Dated report next check: Obtain high-angular-resolution time-series photometry across two predicted troughs to identify the variable star and test a stable same-kind clock.

Full report and deciding evidence

TIC 311461544 | Q093 | binary-next100-2026-11-05:Q093

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6368934920804273152. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): One candidate event does not establish an eclipse or source ownership. Catalogue novelty remains unknown.

Dated report next check: Inspect new sector coverage and obtain an isolated repeat with spatial localization.

Full report and deciding evidence

TIC 447274265 | Q094 | binary-next100-2026-11-05:Q094

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5817915561920616064. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The evidence is a partial candidate, with recurrence and source attribution unestablished. Catalogue novelty remains unknown.

Dated report next check: Obtain uninterrupted coverage of a comparable event and repeat.

Full report and deciding evidence

TIC 149621078 | Q096 | binary-next100-2026-11-05:Q096

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 3746773544537967232. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Eclipse interpretation, source ownership and orbital association remain insecure. Catalogue novelty remains unknown.

Dated report next check: Model and localize the variability, then test whether a stable eclipse-shaped same-kind clock remains.

Full report and deciding evidence

TIC 47675509 | Q097 | binary-next100-2026-11-05:Q097

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 2144871620690367488. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Source ownership, eclipse interpretation and recurrence remain unresolved. Catalogue novelty remains unknown.

Dated report next check: Obtain a second well-covered event with source localization.

Full report and deciding evidence

TIC 147413927 | V007 | V007

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5362949228888372608. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): This is a strong target-centered recurring orbital photometric signal, but raw and alternative curves show a smooth rounded trough after a broad bright hump, without separately resolved ingress, egress or occultation core. Heartbeat-only variability is materially viable, so an eclipse is not established. KSPSAP suppresses early features; Gaia uncertainties are fixed-cycle linear approximations and bandpass/throughput affect neighbor flux bounds.

Dated report next check: Obtain multicolor or high-cadence photometry, or a physical heartbeat model with an additional eclipse component, before calling this an eclipsing system.

Full report and deciding evidence

TIC 365199313 | V017 | V017

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 3711755993274356864. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): No orbital/eclipse period, epoch or depth is adopted for the queued long-period target. The periodogram and minima spacing are approximate short-waveform diagnostics.

Dated report next check: Obtain target-centered difference photometry and test alternating minima and a second sector before assigning an eclipsing source.

Full report and deciding evidence

TIC 27681485 | X007 | X007

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6558289003725146 88. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Complete capable-neighbor inventory remains unknown after two failed Gaia requests. S72 duration 1.21 d differs from earlier 1.9 d and lies on steep trend; model-dependent late timing and Gaia geometry prevent confirmation. Neither 36.50930 d nor its half is a unique orbital-period solution. No formal precision error is claimed.

Dated report next check: Resolve capable close neighbors, obtain source-specific eclipse photometry, and test whether Gaia orbit bias or another binary explains the phase offset.

Full report and deciding evidence

TIC 381548065 | X008 | X008

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5944937948374623744. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): No secure clock, source attribution, second extraction or Gaia geometry exists for the possible singleton. Missing checks remain limitations of a plausible signal; gap windows are not clean nulls.

Dated report next check: Obtain another well-covered event and source localization before assigning an EB period.

Full report and deciding evidence

Refuted selected signals (235)

TIC 418125608 | H001 | binary-review100-2026-11-04:H001

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 1820196595922849536. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Refutation applies to the selected dip claim; a different hidden eclipse is not excluded.

Dated report next check: Independent high-resolution light curve of the s81 interval or a new clean conjunction window.

Full report and deciding evidence

TIC 100590643 | H003 | binary-review100-2026-11-04:H003

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 2903839139857063680. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): This refutes the selected flagged/eclipse interpretation, not every possible unobserved eclipse.

Dated report next check: Check a clean future conjunction with a stable aperture if this variable merits follow-up.

Full report and deciding evidence

TIC 180808330 | H004 | binary-review100-2026-11-04:H004

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 4605155439053175296. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The brightening may be real variability, with source and physical mechanism unassigned.

Dated report next check: Investigate the broad variability separately if of interest.

Full report and deciding evidence

TIC 137500638 | H007 | binary-review100-2026-11-04:H007

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 1145707750552302080. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The broad brightening may have an astrophysical cause; eclipse refutation is limited to this candidate interpretation.

Dated report next check: Analyze the brightening morphology separately if pursued.

Full report and deciding evidence

TIC 137322497 | H009 | binary-review100-2026-11-04:H009

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 544741456749793408. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Selected eclipse interpretation is refuted; alternative variability is not classified.

Dated report next check: Characterize broad variability separately if useful.

Full report and deciding evidence

TIC 52919409 | H010 | binary-review100-2026-11-04:H010

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5583065032167575296. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): This refutes the screened eclipse interpretation but does not identify the physical source of variability.

Dated report next check: Compare independent photometry if the non-eclipse variability is investigated.

Full report and deciding evidence

TIC 158965683 | H011 | binary-review100-2026-11-04:H011

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 4583348069026129920. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): No isolated eclipse center; no physical period or depth reported.

Dated report next check: No secure eclipse ephemeris. If astrophysical variability is of interest, obtain an independently extracted light curve and inspect the broad hump.

Full report and deciding evidence

TIC 396696012 | H014 | binary-review100-2026-11-04:H014

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 4779324987198360448. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): No eclipse period, epoch, or depth.

Dated report next check: Characterize the shorter-period variability separately if desired; do not infer an eclipse period from these screening windows.

Full report and deciding evidence

TIC 278388101 | H015 | binary-review100-2026-11-04:H015

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 4518693040111462400. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): No eclipse ephemeris.

Dated report next check: If pursuing the variable, compare custom pixel extraction across the s80 state changes.

Full report and deciding evidence

TIC 303916910 | H017 | binary-review100-2026-11-04:H017

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6437492253937494528. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): No eclipse ephemeris.

Dated report next check: No eclipse follow-up warranted from this event alone; reassess if a new independent occasion appears.

Full report and deciding evidence

TIC 71469729 | H018 | binary-review100-2026-11-04:H018

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 2998862100122116224. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): No eclipse period, epoch, or depth.

Dated report next check: Inspect the irregular variability as a separate source if of interest; seek independent raw events before an eclipse claim.

Full report and deciding evidence

TIC 233082910 | H020 | binary-review100-2026-11-04:H020

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 2158639297271985920. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): No eclipse ephemeris from this screen.

Dated report next check: Study the short-period oscillation separately if desired; suppress its harmonics before any new long-period eclipse search.

Full report and deciding evidence

TIC 445948155 | H024 | binary-review100-2026-11-04:H024

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 3352525134796760448. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Refutation is of the selected s71 eclipse interpretation; the source of broad variability is not established. Current TESSCut sector inventory adds s44 and an anomalous 1751 entry beyond cached files, neither a needed repeat for this artifact conclusion.

Dated report next check: Study the broad variability with a stable aperture if scientifically useful.

Full report and deciding evidence

TIC 31943345 | H025 | binary-review100-2026-11-04:H025

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 4666938921561051648. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The selected eclipse interpretation is refuted by its broad evolving morphology; this does not exclude an unobserved eclipse elsewhere.

Dated report next check: Characterize the non-eclipse variability separately if pursued.

Full report and deciding evidence

TIC 42217912 | H026 | binary-review100-2026-11-04:H026

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5939499145420713984. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Selected dip is a gap/baseline artifact in this reduction; physical source of broader variation is unassigned. Current sector inventory contains exactly the six cached sectors.

Dated report next check: Use stable independent photometry to study broad variation if desired.

Full report and deciding evidence

TIC 402951606 | H028 | binary-review100-2026-11-04:H028

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 2300554981056288128. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Refutes this selected event as an eclipse; does not prove no other eclipse exists. Current sector inventory also lists s47, absent from cached QLP files, but cannot rescue the positive gap-recovery feature.

Dated report next check: Inspect a stable future conjunction if a separate signal is found.

Full report and deciding evidence

TIC 396798138 | H029 | binary-review100-2026-11-04:H029

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 1106726524296515968. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The selected eclipse interpretation is refuted; the broad variability has no assigned mechanism. Current sector inventory lists s53 beyond the cached set, without changing the s40 morphology.

Dated report next check: Study the broad variability in an independent light curve if useful.

Full report and deciding evidence

TIC 295542293 | H030 | binary-review100-2026-11-04:H030

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6436161604349804160. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Selected eclipse interpretation is refuted by evolving morphology; it does not rule out a separate hidden eclipse or identify the variability mechanism.

Dated report next check: Analyze the multi-day variability separately if pursued.

Full report and deciding evidence

TIC 351338696 | H031 | binary-review100-2026-11-04:H031

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6428584079448787072. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): This refutes the selected repeat-eclipse interpretation; common-mode coincidence is diagnostic, not a proof of the exact instrument mechanism. It does not rule out a weaker unrelated eclipse.

Dated report next check: Reinspect with independent photometry only if a distinct repeat emerges.

Full report and deciding evidence

TIC 175078534 | H033 | binary-review100-2026-11-04:H033

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5537085616261157248. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The selected eclipse interpretation is refuted by the full morphology; the source/mechanism of the oscillation is not determined.

Dated report next check: Study the pulsation/rotation-like variability separately if useful.

Full report and deciding evidence

TIC 103030835 | H034 | binary-review100-2026-11-04:H034

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 550790699146039424. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Refutation applies to the selected repeated eclipse interpretation, not every possible weaker signal. The sector-25 few-cadence structure has limited timing information.

Dated report next check: Check a future clean conjunction only if a distinct feature is found.

Full report and deciding evidence

TIC 56257053 | H035 | binary-review100-2026-11-04:H035

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5643129015942038144. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Selected eclipse interpretation is refuted; the broad variability remains unassigned.

Dated report next check: Characterize broad variability using a stable aperture if desired.

Full report and deciding evidence

TIC 102923272 | H036 | binary-review100-2026-11-04:H036

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5365973230135573504. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Selected eclipse interpretation is refuted; modulation could be astrophysical but is not classified here.

Dated report next check: Analyze the broad modulation separately if useful.

Full report and deciding evidence

TIC 447555213 | H037 | binary-review100-2026-11-04:H037

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5818188270852184320. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Refutes the selected two-sector eclipse claim; gaps prevent using these features as precise nulls for any other hidden signal.

Dated report next check: Seek a clean future event if a separate eclipse signature appears.

Full report and deciding evidence

TIC 442165860 | H038 | binary-review100-2026-11-04:H038

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6055843590360130560. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Selected repeat-eclipse interpretation is refuted; broad variability has no assigned physical cause.

Dated report next check: Use stable independent photometry if studying the broader variation.

Full report and deciding evidence

TIC 320328447 | H040 | binary-review100-2026-11-04:H040

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6448392498678232704. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Selected repeat-eclipse interpretation is refuted; this does not prove the target has no unseen eclipse. Current TESSCut inventory also lists sector 104 beyond cached QLP, but that cannot make the two positive features resolved eclipses.

Dated report next check: Inspect new photometry if a distinct isolated event emerges.

Full report and deciding evidence

TIC 312968253 | H041 | binary-review100-2026-11-04:H041

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5901423951092280320. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The selected s102/s103 dips are discontinuities and changing baselines, not repeatable eclipse profiles. This refutes these flags, not every possible binary signal.

Dated report next check: If useful, inspect a future continuous event with a stable aperture.

Full report and deciding evidence

TIC 154809818 | H043 | binary-review100-2026-11-04:H043

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 1147196145699645696. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The selected shallow dips track irregular oscillatory variability; the Gaia AstroSpectroSB1 orbit has no phase elements in the source packet. Refutation is limited to the screened eclipse interpretation.

Dated report next check: Use higher cadence stable-aperture data if the short-timescale variability itself is of interest.

Full report and deciding evidence

TIC 198182954 | H044 | binary-review100-2026-11-04:H044

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 16301588615829644 80. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The selected flags are smooth, evolving short-timescale stellar variability. This does not exclude a separate unrecognized eclipsing system.

Dated report next check: Characterize the oscillation/rotation signal separately if scientifically useful.

Full report and deciding evidence

TIC 289989985 | H045 | binary-review100-2026-11-04:H045

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 3522078761330617344. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Selected events are edge/gap and baseline features; no repeated eclipse clock is established. This does not decide whether the SB1 star is otherwise variable.

Dated report next check: Reobserve a continuous predicted conjunction if the spectroscopic binary merits photometry.

Full report and deciding evidence

TIC 174187654 | H048 | binary-review100-2026-11-04:H048

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5915759933436486528. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The selected s93/s102/s103 features are dominated by aperture/source contamination and sector discontinuities; the target might still have unrelated variability.

Dated report next check: Use resolved photometry to determine the bright neighboring star's variability if desired.

Full report and deciding evidence

TIC 299397214 | H049 | binary-review100-2026-11-04:H049

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5829797399984779264. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Two selected flags are level changes on broad trends. Neither provides a complete eclipse profile or a two-event timing baseline.

Dated report next check: Inspect a future uninterrupted Gaia conjunction if orbital eclipses remain of interest.

Full report and deciding evidence

TIC 424916690 | H050 | binary-review100-2026-11-04:H050

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6659220868304431488. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Selected windows are data-break steps and slopes, without repeatable eclipse contacts. This verdict applies to the selected claim only.

Dated report next check: If still needed, observe a continuous predicted conjunction with a stable aperture.

Full report and deciding evidence

TIC 219013137 | H051 | binary-review100-2026-11-04:H051

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 1694963767685503872. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The selected sector-80 feature is refuted; these data do not rule out a weaker separate eclipse.

Dated report next check: Only reconsider on a new resolved repeat with complete ingress and egress.

Full report and deciding evidence

TIC 224279121 | H052 | binary-review100-2026-11-04:H052

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6537661233557980928. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The selected sector-96 eclipse interpretation is refuted; synchronized behavior does not identify a unique instrument mechanism or the source of the broader modulation.

Dated report next check: Study the modulation with stable independent photometry if useful.

Full report and deciding evidence

TIC 318649725 | H053 | binary-review100-2026-11-04:H053

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6342084743774717312. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): A common feature is diagnostic, without identifying a unique instrumental mechanism or excluding an unrelated weaker eclipse.

Dated report next check: Seek a new isolated complete event before timing or source analysis.

Full report and deciding evidence

TIC 70761950 | H054 | binary-review100-2026-11-04:H054

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 2309735834427777920. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The selected features are positive gap and step artifacts, so the eclipse interpretation is refuted.

Dated report next check: Only revisit if a distinct complete repeat appears.

Full report and deciding evidence

TIC 278081787 | H055 | binary-review100-2026-11-04:H055

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5211293208483257088. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Refutation applies to the selected dip and brightening interpretation; the target could host a weaker unrelated signal.

Dated report next check: Look for a separate complete eclipse in future photometry before assigning a period.

Full report and deciding evidence

TIC 68037692 | H056 | binary-review100-2026-11-04:H056

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 336306835610812288. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The selected eclipse interpretation is refuted; the non-eclipse variability is not physically classified here.

Dated report next check: Analyze the rapid variability separately if useful.

Full report and deciding evidence

TIC 262548177 | H057 | binary-review100-2026-11-04:H057

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 4935773672080920704. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The selected eclipse feature is refuted; synchronized behavior does not assign a unique mechanism or exclude an unrelated eclipse.

Dated report next check: Obtain stable independent photometry only if a distinct contact-shaped event emerges.

Full report and deciding evidence

TIC 231261404 | H058 | binary-review100-2026-11-04:H058

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6511402593784634496. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The selected dip and brightenings are positive step/gap morphology, refuting an eclipse interpretation.

Dated report next check: Reinspect only if a complete isolated repeat is observed.

Full report and deciding evidence

TIC 129543547 | H059 | binary-review100-2026-11-04:H059

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6669670519439832704. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The selected sector-94 eclipse is refuted; a weaker separate eclipse remains possible.

Dated report next check: Require a new isolated complete event before source or timing work.

Full report and deciding evidence

TIC 392924671 | H060 | binary-review100-2026-11-04:H060

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 3714017375159903872. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Pixel redistribution, centroid drift and the reduction discrepancy support an instrumental origin of the selected trough; a reduction alone can suppress real signals. TESSCut is not a separate observing occasion.

Dated report next check: Only reconsider on a distinct resolved event in stable photometry.

Full report and deciding evidence

TIC 462740245 | H061 | binary-review100-2026-11-04:H061

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 4576730383421277056. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Positive background and centroid co-movement refutes the selected flag, not the existence of a spectroscopic binary.

Dated report next check: If a future uninterrupted eclipse-shaped event appears, extract a stable target aperture and time it.

Full report and deciding evidence

TIC 74262097 | H062 | binary-review100-2026-11-04:H062

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5919102410114315264. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Gap/step morphology refutes the selected flag; untested low-depth variability elsewhere is outside this flag review.

Dated report next check: Require a continuous candidate event with a stable position and local baseline before timing.

Full report and deciding evidence

TIC 62422756 | H063 | binary-review100-2026-11-04:H063

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 2459151630621837696. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The s97 step refutes this selected eclipse flag. The Gaia SB1 orbit at 25.072237 d remains valid independent context.

Dated report next check: If revisited, localize a new complete event on calibrated pixels.

Full report and deciding evidence

TIC 309827592 | H064 | binary-review100-2026-11-04:H064

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 1592504127384202112. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): A gap-linked background/position relaxation positively refutes the selected dip interpretation.

Dated report next check: Inspect any future isolated dip after verifying target-centred pixel flux.

Full report and deciding evidence

TIC 38016794 | H065 | binary-review100-2026-11-04:H065

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 3199385189639870848. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Repeated detector/aperture resets refute the selected flags; no binary-wide exclusion is inferred.

Dated report next check: Only a stable-aperture event outside the sawtooth pattern would justify renewed eclipse analysis.

Full report and deciding evidence

TIC 35979155 | H068 | binary-review100-2026-11-04:H068

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5417956868583597952. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The observed step and position change positively refute the selected s99 eclipse flag.

Dated report next check: Inspect a complete stable-aperture event if new observations warrant it.

Full report and deciding evidence

TIC 372317693 | H069 | binary-review100-2026-11-04:H069

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6376536394443224576. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Background/centroid excursion and discontinuous baseline positively refute the selected eclipse flags.

Dated report next check: A future continuous dip would require pixel localization and an independent reduction.

Full report and deciding evidence

TIC 354419348 | H070 | binary-review100-2026-11-04:H070

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 2281250855409110144. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The original s59 dip is positively contradicted by its rising raw flux and unstable extraction.

Dated report next check: Reassess only a complete target-centred event with positive stable flux and local baseline.

Full report and deciding evidence

TIC 199903432 | H071 | binary-review100-2026-11-04:H071

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 1957881393304946816. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Fold minima are on evolving s56 baselines; no credible measured eclipse center or depth.

Dated report next check: Revisit only if an independently observed, stable-baseline dip is found.

Full report and deciding evidence

TIC 393487481 | H073 | binary-review100-2026-11-04:H073

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 3868922418731317504. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The aperture varies, but instrumental ramps and real stellar variability are not separated; the 28.79/14.35 d selected fold signal is refuted as evidence for eclipses.

Dated report next check: Characterize variability with independent photometry before revisiting any eclipse hypothesis.

Full report and deciding evidence

TIC 250225622 | H074 | binary-review100-2026-11-04:H074

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6899376193746135040. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Large sector-scale instrumental or extraction trends prevent a physical depth or center from being measured.

Dated report next check: Use a stable independent light curve if a new isolated event appears.

Full report and deciding evidence

TIC 247563559 | H075 | binary-review100-2026-11-04:H075

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 3347771190117117184. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The s98 baseline is unstable; this refutes the selected fold eclipse interpretation, not every possible shorter-period signal.

Dated report next check: Inspect a future stable-window event if one emerges.

Full report and deciding evidence

TIC 23885936 | H076 | binary-review100-2026-11-04:H076

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6329931051478187776. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The s51 step and pipeline-dependent amplitude invalidate a measured eclipse clock.

Dated report next check: Check a new stable-baseline dip if available.

Full report and deciding evidence

TIC 41859748 | H077 | binary-review100-2026-11-04:H077

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 4985170846866082176. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Later s105–107 cutouts are exploratory coverage; they are not asserted as sensitivity-calibrated nulls. A different subtle event remains possible.

Dated report next check: Seek a complete, independently timed event with stable background.

Full report and deciding evidence

TIC 295743311 | H078 | binary-review100-2026-11-04:H078

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 3033020352992128896. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Aperture scale strongly changes the apparent feature; no measured eclipse center. The two extractions share photons.

Dated report next check: Follow up only a new isolated event with difference-image attribution.

Full report and deciding evidence

TIC 339095955 | H079 | binary-review100-2026-11-04:H079

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 4874202090436780 80. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The apparent fold depth is dominated by an evolving baseline and gaps; no photometric period is measured.

Dated report next check: Test any future isolated dip on a continuous baseline.

Full report and deciding evidence

TIC 452298854 | H080 | binary-review100-2026-11-04:H080

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 2031745656803228160. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Several apparent fluctuations are weak and source attribution is not established; this verdict addresses the selected fold claim.

Dated report next check: Reassess if future data yield a coherent detached event.

Full report and deciding evidence

TIC 146516744 | H086 | binary-review100-2026-11-04:H086

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 2974839282884152704. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The selected target brightening is refuted by off-target positive flux plus concurrent background/position disturbance. The image moment is descriptive, not a fitted PSF position. An unmodeled target flare coincident with contamination cannot be excluded absolutely, and this says nothing about weaker separate binary signals.

Dated report next check: Only revisit with registered source-resolved pixels or an independent target-localized repeat.

Full report and deciding evidence

TIC 154571577 | H091 | binary-review100-2026-11-04:H091

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 1692108645225929984. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Selected fold rejected from raw trends/steps and observed contrary windows; unrelated variability not characterized.

Dated report next check: A genuine unrelated eclipse elsewhere on this star is outside this selected-fold conclusion.

Full report and deciding evidence

TIC 307119823 | H092 | binary-review100-2026-11-04:H092

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 402994410562917504. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Selected fold rejected from raw trends/steps and observed contrary windows; unrelated variability not characterized.

Dated report next check: A pixel comparison could identify the origin of the sector transitions if the variability itself is pursued.

Full report and deciding evidence

TIC 118207666 | H093 | binary-review100-2026-11-04:H093

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5703377580206903680. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Selected fold rejected from raw trends/steps and observed contrary windows; unrelated variability not characterized.

Dated report next check: Investigate broad variability with an independent aperture if it becomes a separate target of interest.

Full report and deciding evidence

TIC 371699871 | H095 | binary-review100-2026-11-04:H095

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 1799097581944489856. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Selected fold rejected from raw trends/steps and observed contrary windows; unrelated variability not characterized.

Dated report next check: A different period search would be needed to assess unrelated variability.

Full report and deciding evidence

TIC 91794676 | H096 | binary-review100-2026-11-04:H096

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5348137467915602304. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Selected fold rejected from raw trends/steps and observed contrary windows; unrelated variability not characterized.

Dated report next check: Pixel or independent aperture data could characterize the long s90 excursion, which is separate from the rejected fold.

Full report and deciding evidence

TIC 336670019 | H097 | binary-review100-2026-11-04:H097

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 4538298294501513728. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Selected fold rejected from raw trends/steps and observed contrary windows; unrelated variability not characterized.

Dated report next check: Characterize the sector-edge recovery separately if scientifically useful.

Full report and deciding evidence

TIC 341854405 | H098 | binary-review100-2026-11-04:H098

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5291612949507707392. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Selected fold rejected from raw trends/steps and observed contrary windows; unrelated variability not characterized.

Dated report next check: A fresh search could test whether any unrelated isolated dip in the long time series warrants follow-up.

Full report and deciding evidence

TIC 470982003 | H099 | binary-review100-2026-11-04:H099

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 986467955403305984. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Selected fold rejected from raw trends/steps and observed contrary windows; unrelated variability not characterized.

Dated report next check: Inspect s47 with independent pixel photometry if its weak depression is pursued.

Full report and deciding evidence

TIC 271782868 | T010 | binary-priority100-2026-11-05:T010

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5696078781508847744. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The sector-88 QLP rectangle is contradicted by simultaneous target-centered TESSCut flux; its QLP aperture/background origin is unresolved. Sector-109 cutout has near-zero target flux and supplies no sensitive null.

Dated report next check: Inspect the QLP sector-88 aperture and background pixels to identify the rectangular signal origin.

Full report and deciding evidence

TIC 355493553 | T011 | binary-priority100-2026-11-05:T011

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6498084965351789696. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The S96 QLP dip resumes after a 1.3 d gap, but target-centered S96 TESSCut raw pixels show an opposite-sign brightening/recovery. S105 does not cover the next +6 Gaia-cycle center at 4234.5 BTJD; its strong bright spike at 4219 is not an eclipse.

Dated report next check: No eclipse follow-up from the S96 flag; independently investigate the QLP/raw-pixel discrepancy if this star is otherwise of interest.

Full report and deciding evidence

TIC 152577827 | T013 | binary-priority100-2026-11-05:T013

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5596083868330026624. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Broad stellar variability can conceal smaller eclipses; this review refutes the screened coherent eclipse interpretation only.

Dated report next check: If the variable star is of interest, model its multi-timescale variability and search residuals independently.

Full report and deciding evidence

TIC 230006509 | T015 | binary-priority100-2026-11-05:T015

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 2242178369686093568. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The star has broad real variability; small eclipses buried in it are beyond this flagged-candidate claim.

Dated report next check: A separate variability analysis could classify the broad modulation; do not treat these windows as eclipse times.

Full report and deciding evidence

TIC 441540331 | T016 | binary-priority100-2026-11-05:T016

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 1112204115129867776. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): S19 is close to a sector edge; the QLP feature is contradicted by independent raw-pixel extraction and need not be treated as an eclipse center. Conditional Gaia-period nulls are supportive, not the sole refutation.

Dated report next check: No eclipse follow-up from the S19 flag; test any future independent dip if found.

Full report and deciding evidence

TIC 292150400 | T017 | binary-priority100-2026-11-05:T017

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 3563811004362456 32. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): No claim is made about other variability outside the screened S85 window.

Dated report next check: No eclipse follow-up is warranted from this flagged window; re-screen only if independent data show a dip.

Full report and deciding evidence

TIC 320592245 | T018 | binary-priority100-2026-11-05:T018

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6640742231072336128. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): S94 remains broad variable structure; the short S104 QLP trough is not reproduced as a target-centered raw-pixel deficit. No claim excludes a hidden unrelated eclipse.

Dated report next check: Do not use S94/S104 screened times as a binary ephemeris; re-evaluate only a fresh repeatable dip.

Full report and deciding evidence

TIC 220343379 | T019 | binary-priority100-2026-11-05:T019

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6467446180491709440. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): New S105 starts 0.16 d before the conditional Gaia repeat, so it does not test a full ingress; the S103 alternate-pixel morphology is the decisive contrary evidence.

Dated report next check: Do not use the flagged troughs as eclipse times; obtain an independent repeat only if later photometry reveals a clean dip.

Full report and deciding evidence

TIC 196915110 | T020 | binary-priority100-2026-11-05:T020

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 4045266251193435520. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): This does not exclude the Gaia spectroscopic binary or unrelated lower-amplitude eclipses.

Dated report next check: Treat strong S93 event as a brightening/processing anomaly; assess separately if scientifically useful.

Full report and deciding evidence

TIC 260625051 | T021 | binary-priority100-2026-11-05:T021

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5798924900162485760. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Retained windows are dominated by gross sector trends and discontinuities; no eclipse clock can be measured.

Dated report next check: If an independent future light curve is obtained, search it afresh for isolated events.

Full report and deciding evidence

TIC 250686128 | T022 | binary-priority100-2026-11-05:T022

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 4552165399580570 88. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): One selected window; no independent astrophysical eclipse remains after raw-shape inspection.

Dated report next check: Revisit only if a future light curve shows an isolated return to baseline at a consistent phase.

Full report and deciding evidence

TIC 466271646 | T023 | binary-priority100-2026-11-05:T023

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6429348270091433344. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The s101 flagged ingress is truncated; repeated sector-edge resets explain similar later shapes.

Dated report next check: A future isolated event away from a data gap would warrant a new review.

Full report and deciding evidence

TIC 288608943 | T027 | binary-priority100-2026-11-05:T027

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 2296723183033595392. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The largest sector81 dips are on orbital-gap boundaries; no secure isolated eclipse is timed.

Dated report next check: Reassess if an independent, fully observed eclipse-shaped event appears.

Full report and deciding evidence

TIC 289008887 | T028 | binary-priority100-2026-11-05:T028

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 3029185222067707648. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Strong variable flux is present, but no isolated eclipse clock follows the 33.73 d Gaia orbit.

Dated report next check: Classify the smooth stellar/field variability separately if useful; search future data for isolated eclipses only on new evidence.

Full report and deciding evidence

TIC 147088723 | T029 | binary-priority100-2026-11-05:T029

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5363594574160217600. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The raw dips belong to a continuous quasi-periodic wave, with no eclipse-like isolated floor or Gaia-period clock.

Dated report next check: Model the non-eclipse variability if astrophysically interesting.

Full report and deciding evidence

TIC 208247699 | T030 | binary-priority100-2026-11-05:T030

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5870898415961768064. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): All retained windows are steep trends or baseline discontinuities; no repeatable eclipse center.

Dated report next check: Reopen only for an isolated new event supported by raw and spatial data.

Full report and deciding evidence

TIC 367739437 | T031 | binary-priority100-2026-11-05:T031

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 1709445778932665728. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): No secure isolated eclipse center or period can be measured from these flags.

Dated report next check: Reopen if a clean isolated same-kind event appears in future data.

Full report and deciding evidence

TIC 466098039 | T032 | binary-priority100-2026-11-05:T032

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6428108781184345600. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): All four retained windows are interrupted or broad; none supports a measured center.

Dated report next check: Reassess only with a fully observed isolated return to baseline.

Full report and deciding evidence

TIC 14949343 | T034 | binary-priority100-2026-11-05:T034

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 2057705882197332224. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): No unique astrophysical deficit or timing center is supported.

Dated report next check: A future clean aperture could test for independent periodic dips.

Full report and deciding evidence

TIC 253889547 | T035 | binary-priority100-2026-11-05:T035

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6731175554934054400. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Only one disrupted window exists; no measured eclipse clock.

Dated report next check: Revisit an isolated event away from the spacecraft gap.

Full report and deciding evidence

TIC 309965535 | T037 | binary-priority100-2026-11-05:T037

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 1125493504154041088. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The local TESSCut background estimate is approximate, so the spatial test alone cannot exclude every physical signal; combined with the coincident gap/step, this selected trough does not support a target eclipse or clock.

Dated report next check: Test any future isolated raw target-aperture event away from a background transition.

Full report and deciding evidence

TIC 318272941 | T038 | binary-priority100-2026-11-05:T038

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6343141099571427840. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): One disrupted window only; no reliable eclipse center.

Dated report next check: Seek a clean repeat in a later sector.

Full report and deciding evidence

TIC 280866822 | T039 | binary-priority100-2026-11-05:T039

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5206687045036851840. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): There is no measured same-kind return at the 50.14 d Gaia period.

Dated report next check: Reopen if a future sector shows a fully bracketed event.

Full report and deciding evidence

TIC 321979675 | T040 | binary-priority100-2026-11-05:T040

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 4991198781926275072. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Neither flagged occasion supports a precise center or physical eclipse depth.

Dated report next check: Require an isolated repeat independent of flare or sector boundary.

Full report and deciding evidence

TIC 233152264 | T041 | binary-priority100-2026-11-05:T041

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 2161325404178384000. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): This refutes the selected long-period eclipse interpretation, not the Gaia SB1 orbit or any unsearched lower-amplitude eclipse.

Dated report next check: Search after removing the measured short-period modulation if the star is revisited.

Full report and deciding evidence

TIC 307018189 | T044 | binary-priority100-2026-11-05:T044

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 3357297530660470528. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The spatial peak is on the bright neighbor wing, not a fitted point-source centroid; the target aperture is contaminated. The conclusion concerns this selected target-associated event.

Dated report next check: Separate the bright field star and target with a fitted pixel response if this sky position is pursued.

Full report and deciding evidence

TIC 251325499 | T046 | binary-priority100-2026-11-05:T046

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 461150677232719232. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): This refutes the selected dip interpretation, not the presence of any unsearched variability.

Dated report next check: Inspect independent full-baseline photometry only if the source is selected again.

Full report and deciding evidence

TIC 320414796 | T047 | binary-priority100-2026-11-05:T047

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 3143959530039762560. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The short-timescale variability explains the selected troughs but does not disprove the Gaia binary orbit.

Dated report next check: A residual eclipse search after variability modeling would be needed to test a separate eclipse claim.

Full report and deciding evidence

TIC 142119008 | T048 | binary-priority100-2026-11-05:T048

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 558116779478994304. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): TESSCut outer-pixel background has 15.5% zero pixels, so its background-subtracted curve is invalid and excluded; the raw 3x3 comparison is used. A different unobserved orbit is not excluded.

Dated report next check: Revisit only if an independent observing occasion supplies a coherent dip.

Full report and deciding evidence

TIC 334142514 | T049 | binary-priority100-2026-11-05:T049

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5718545274399793792. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The selected eclipse-shaped flag is refuted by continuous raw wave morphology; the variability mechanism and possible additional signals are not assigned.

Dated report next check: Investigate the variability mechanism separately if scientifically useful.

Full report and deciding evidence

TIC 288157030 | T051 | binary-priority100-2026-11-05:T051

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 2949877822014915200. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The s87 step has no measured eclipse midpoint; its background response makes the selected flag instrumental. Current TESSCut footprint lists new s108/s109 coverage, not analyzed here because the selected feature is positively refuted.

Dated report next check: Review s108/s109 raw target pixels if an independent future eclipse claim arises.

Full report and deciding evidence

TIC 41975422 | T052 | binary-priority100-2026-11-05:T052

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5008921603695895552. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): There are no reliable eclipse centers or cycle count from these two interruption-edge descents. Current TESSCut lists s104-s107 in addition to cached sectors; those are not needed to establish the retained s69 feature as instrumental.

Dated report next check: Inspect current-sector target pixels only if an independent eclipse indication appears.

Full report and deciding evidence

TIC 100938468 | T053 | binary-priority100-2026-11-05:T053

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5710141908882383744. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The s88 shape is a gap-associated background step, without measured eclipse ingress, center or egress.

Dated report next check: Seek a clean future raw eclipse before any physical-period claim.

Full report and deciding evidence

TIC 198279430 | T054 | binary-priority100-2026-11-05:T054

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 1634905521999277952. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Bright features can be variable or instrumental; the stated background correlation is positive contrary evidence for these retained eclipse flags, not a proof that the star has no intrinsic variability.

Dated report next check: Revisit only with independently extracted stable-background pixel photometry.

Full report and deciding evidence

TIC 417309915 | T055 | binary-priority100-2026-11-05:T055

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 1995022621220079104. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The brightening physics is unsettled; the selected dip is a baseline artifact. The pixel extraction is of the same TESS photons and not another observing occasion.

Dated report next check: If the brightenings matter independently, compare calibrated pixel background across spacecraft orbits.

Full report and deciding evidence

TIC 51255152 | T056 | binary-priority100-2026-11-05:T056

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5753754832168478976. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The selected s99 deficit is not a localized eclipse; strong variability or extraction instability deserves separate investigation. The TESSCut extraction is of the same photons.

Dated report next check: Use calibrated independent aperture photometry if seeking the origin of the large excursions.

Full report and deciding evidence

TIC 164669150 | T058 | binary-priority100-2026-11-05:T058

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 2107357456480717056. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Multiple sectors make the gap pattern recur, but they do not supply repeated same-kind eclipses. Background and baseline behavior leave the origin of broad variability open.

Dated report next check: Inspect independent target-pixel photometry only if a stable eclipse ephemeris emerges.

Full report and deciding evidence

TIC 180177949 | T060 | binary-priority100-2026-11-05:T060

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6054993358639322624. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The short-period modulation is real but its physical mechanism and relation to the Gaia SB2 are not settled. The selected long-period eclipse flag is refuted, not all possible eclipses.

Dated report next check: Classify the short-period variable separately if of interest.

Full report and deciding evidence

TIC 174306672 | T061 | binary-priority100-2026-11-05:T061

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 1937604302944104704. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The edge-truncated TESSCut aperture cannot establish whether a much smaller physical signal belongs to either star. The selected 15-24% QLP eclipse interpretation is refuted.

Dated report next check: Only a target-flux-valid, fully captured aperture or independent photometry showing a repeated isolated deficit would reopen the eclipse claim.

Full report and deciding evidence

TIC 196423445 | T064 | binary-priority100-2026-11-05:T064

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5647494347671741568. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The new-sector extraction has no local background correction; its very large positive excursions make the qualitative shape robust, but small-amplitude null depth is not calibrated.

Dated report next check: Reopen only for an isolated target-centered raw deficit independent of the broad brightenings.

Full report and deciding evidence

TIC 468294703 | T066 | binary-priority100-2026-11-05:T066

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5666646584530555264. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The gap prevents any precise center for the s86 decline.

Dated report next check: A separate isolated raw dip would be required to reopen the selected eclipse claim.

Full report and deciding evidence

TIC 198238142 | T068 | binary-priority100-2026-11-05:T068

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 1636006889053061888. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The raw positive excursion could have a separate source or astrophysical cause; it is not an eclipse.

Dated report next check: No eclipse follow-up from this flag; inspect any future independent dip on its own merits.

Full report and deciding evidence

TIC 298307278 | T072 | binary-priority100-2026-11-05:T072

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 1989111887224781056. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The retained sector-84 feature follows a strong background excursion and disappears in the alternative corrected flux; no eclipse clock.

Dated report next check: Revisit only if a new raw event independent of the background transient appears.

Full report and deciding evidence

TIC 122980411 | T085 | binary-priority100-2026-11-05:T085

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 3080899205293455232. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The neighboring EB is real; this verdict refutes its assignment to the queued Gaia SB1 target, whose distinct 51.025-day spectroscopic orbit is not disproved. The present single-event moment alone would be insufficient; prior stacked PSF/deblended evidence decides attribution.

Dated report next check: If revisiting the 51.025-day Gaia target orbit, search for a separate target-centered eclipse after modeling HJ 68 B contamination.

Full report and deciding evidence

TIC 370126865 | N002 | binary-next10-2026-11-05:N002

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5101762127868823O4. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Refutes attribution of selected signal to queued target, not its possible independent binarity. Nondetections of target eclipses are not claimed.

Dated report next check: If scientifically useful, review the G11.98 neighbor as a separate target.

Full report and deciding evidence

TIC 238134171 | N003 | binary-next10-2026-11-05:N003

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5503729255267891200. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Selected detector windows refuted as eclipses; this does not prove the star has no binary eclipses elsewhere.

Dated report next check: Use a stable independent light curve if pursuing this variable.

Full report and deciding evidence

TIC 235985439 | N009 | binary-next10-2026-11-05:N009

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 2292102279259435776. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The neighbor itself may be a real EB; no verdict on target independent variability.

Dated report next check: Review G12.89 neighbor separately if desired.

Full report and deciding evidence

TIC 202509019 | F001 | binary-next40-2026-11-05:F001

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 1615623249143654016. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Refutes attribution of the selected eclipse train to this queued target, not the target's possible independent binarity. Difference-centroid systematics and blended apertures remain.

Dated report next check: Review the neighboring Gaia source as a separate candidate if useful.

Full report and deciding evidence

TIC 234991077 | F004 | binary-next40-2026-11-05:F004

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6490284754986167552. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Refutes these selected QLP windows as demonstrated target eclipses; does not prove absence of binarity or rule out a future resolved event.

Dated report next check: Use a fully covered event in independent coverage before reconsidering eclipse status.

Full report and deciding evidence

TIC 372420428 | F005 | binary-next40-2026-11-05:F005

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6401166623136580224. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Refutes the selected screening features, not all possible binary behavior; some lower-amplitude variation remains.

Dated report next check: Review a future fully covered short dip if one appears.

Full report and deciding evidence

TIC 379192758 | F009 | binary-next40-2026-11-05:F009

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6650247444675679488. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Refutes selected giant eclipse attribution to queued target, not all low-level variability. The neighbor is not promoted without its own review.

Dated report next check: If useful, review the off-target/contaminating source as a separate candidate.

Full report and deciding evidence

TIC 17238861 | F011 | binary-next40-2026-11-05:F011

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 796525844234415744. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Selected dips are off target; this does not rule out other eclipses of TIC 17238861.

Dated report next check: Review TIC 17238865 as its own lead if desired; obtain fresh cutouts only if the historical attribution needs remeasurement.

Full report and deciding evidence

TIC 466134845 | F015 | binary-next40-2026-11-05:F015

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6417553057243290112. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Positive gap/step/ramp evidence refutes the selected eclipse flags; no independent secure repeat was isolated. This does not exclude an unrelated binary signal.

Dated report next check: Only revisit if independently reduced time series shows a sharp recurring event away from gap boundaries.

Full report and deciding evidence

TIC 340638289 | F018 | binary-next40-2026-11-05:F018

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5294294658367361280. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The selected windows have positive trend/gap/step evidence, with no secure same-kind raw eclipses; an unrelated signal remains possible. S89 is available but uncached.

Dated report next check: Inspect S89 only if a fresh event away from discontinuities establishes an eclipse interpretation.

Full report and deciding evidence

TIC 374343837 | F019 | binary-next40-2026-11-05:F019

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6423735473686817664. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Positive gap/step/ramp context refutes the selected eclipse flags; this is not a global exclusion of binarity.

Dated report next check: Require a fresh sharp event with stable baselines before any orbital or source follow-up.

Full report and deciding evidence

TIC 253889190 | F020 | binary-next40-2026-11-05:F020

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6731129684683215488. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The two selected windows do not show comparable isolated eclipse profiles or a secure clock. S13 is available but uncached.

Dated report next check: Review S13 only if an independent sharp event warrants reconsideration of this detector flag.

Full report and deciding evidence

TIC 300599020 | F021 | binary-next40-2026-11-05:F021

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5268923187036636160. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): This refutes the flagged signal, not the Gaia SB1 orbit or every possible faint eclipse. Available sectors 3 and 30 are uncached but the detected windows already have positive artifact evidence.

Dated report next check: Inspect a future independently reduced light curve only if a new phase-coherent event appears.

Full report and deciding evidence

TIC 238926302 | F024 | binary-next40-2026-11-05:F024

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5500666290750087552. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Artifact evidence refutes this detection sequence, not the Gaia SB1 star or all possible faint eclipses. Local trapezoid widths often hit the 1.5-d bound and are not physical durations.

Dated report next check: Recheck only after an independent phase-coherent dip occurs away from a gap.

Full report and deciding evidence

TIC 351555241 | F025 | binary-next40-2026-11-05:F025

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6426599941995042304. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The false flagged dips do not rule out a separate low-amplitude EB signal. All local flagged-event fits are bound or singular affected.

Dated report next check: Require a complete eclipse with ingress, core and egress away from a sector gap.

Full report and deciding evidence

TIC 351350853 | F026 | binary-next40-2026-11-05:F026

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6429977160679936768. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): This refutes the retained dip flags, not the SB1 orbit. A raw Gaia-period fold is strongly shaped by sector baselines and does not set a sensitive eclipse upper limit.

Dated report next check: Seek a fully observed, independently timed event away from the shared gaps.

Full report and deciding evidence

TIC 101580125 | F029 | binary-next40-2026-11-05:F029

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6667552039706187776. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): This positive artifact finding addresses the flagged dips only. S105 is currently available but uncached; it is not needed to explain the two artifacts and remains an untested future check.

Dated report next check: Inspect S105 or another independent sector only if a clean eclipse away from the common gaps is identified.

Full report and deciding evidence

TIC 288649491 | F030 | binary-next40-2026-11-05:F030

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 3027262760354865408. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Pixel deblending is approximate, but exact period identity, capable neighbor flux and the spatial difference jointly support off-target ownership. This refutes a target eclipse claim from these dips, not the independent Gaia SB1 orbit. The target-scoped catalogue status remains scoped nonmatch; the nearby EB is known.

Dated report next check: Use resolved aperture or high-resolution photometry if target eclipse status must be tested independently.

Full report and deciding evidence

TIC 382367241 | F031 | binary-next40-2026-11-05:F031

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6434008245186920576. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): This is a verdict on selected bulk flags, not a claim that the star cannot be binary. No secure same-kind raw eclipse centers or orbital period were measured.

Dated report next check: Seek an isolated full eclipse in a sector with valid target-centered pixels before reconsidering the physical claim.

Full report and deciding evidence

TIC 177255132 | F034 | binary-next40-2026-11-05:F034

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5260895790080903936. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The selected flags have positive common or step context. This does not rule out other eclipses in the extensive cached coverage; no secure center or period is adopted.

Dated report next check: Search for an isolated target-centered eclipse before reopening the selected-source claim.

Full report and deciding evidence

TIC 283695353 | F035 | binary-next40-2026-11-05:F035

Included claim: False. **Novelty decision:** known_prior_recovery. Gaia DR3: 5695831872425213440. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): This refutes the selected bulk detections only, not the published VSX classification or all possible variability of this source. Three cached sectors provide no measured secure eclipse clock.

Dated report next check: Check the VSX light curve and obtain a complete resolved event at its listed 57.7-d clock before revising the physical status.

Full report and deciding evidence

TIC 409783649 | F036 | binary-next40-2026-11-05:F036

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6441771553190585984. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): No clean source-specific eclipse center, independent orbital clock or conjunction match was measured. An unrelated binary signal remains possible.

Dated report next check: Find an isolated full raw event with valid WCS source attribution.

Full report and deciding evidence

TIC 200787666 | F037 | binary-next40-2026-11-05:F037

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 4737458711148691968. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): This is a bounded refutation of the selected windows as an eclipse sequence; it does not classify all of the star's variability. S31 is available outside the cached set, but no provisional clean event clock makes it a decisive null.

Dated report next check: Characterize the long-timescale variability and revisit only a discrete isolated event; include S31 if a clock emerges.

Full report and deciding evidence

TIC 424881909 | F039 | binary-next40-2026-11-05:F039

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6643831897403697280. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The selected windows have positive instrumental/baseline context; this does not exclude an unrelated eclipse elsewhere. No measured same-kind clock is supported.

Dated report next check: Require an isolated full target-centered eclipse before assigning a period.

Full report and deciding evidence

TIC 424853769 | F040 | binary-next40-2026-11-05:F040

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6646209522579139968. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): No clean repeated eclipse or orbital association is established. Other variability of this target remains unclassified.

Dated report next check: Inspect an isolated event with valid WCS target and neighbor photometry.

Full report and deciding evidence

TIC 89874812 | Q001 | binary-next100-2026-11-05:Q001

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 2058409810168936192. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): This refutes the selected bulk flags as evidence for this target, not any other possible binary signal.

Dated report next check: Seek an isolated full target-centered event before revisiting an eclipse claim.

Full report and deciding evidence

TIC 355363510 | Q003 | binary-next100-2026-11-05:Q003

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6642708780635500544. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The selected-window verdict does not rule out unrelated eclipses elsewhere in this star.

Dated report next check: Require an isolated full event with valid target pixels.

Full report and deciding evidence

TIC 290374334 | Q004 | binary-next100-2026-11-05:Q004

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6358811339290114176. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): No secure same-kind raw centers or orbit association result from these selected windows.

Dated report next check: Find and localize an isolated repeated dip.

Full report and deciding evidence

TIC 364268504 | Q006 | binary-next100-2026-11-05:Q006

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5486140780076144384. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): This concerns the selected eclipse interpretation; the star remains variable and could have other unexamined binary signals.

Dated report next check: Measure a stable source-specific eclipse waveform in independent observing windows before assigning a clock.

Full report and deciding evidence

TIC 24196402 | Q007 | binary-next100-2026-11-05:Q007

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 4588487392533805824. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The selected flags do not establish an eclipse sequence; other variability remains possible.

Dated report next check: Inspect an isolated raw dip in another sector with valid target pixels.

Full report and deciding evidence

TIC 425726171 | Q008 | binary-next100-2026-11-05:Q008

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6664054183982983808. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The apparent cross-sector repetition is instrumental evidence for the selected windows only.

Dated report next check: Require an isolated target-centered full eclipse to reopen.

Full report and deciding evidence

TIC 117157551 | Q010 | binary-next100-2026-11-05:Q010

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 4994200964065634432. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The selected windows do not establish a source-specific eclipse; any independent variability remains unclassified.

Dated report next check: Find a clean full target-centered event before adopting timing.

Full report and deciding evidence

TIC 407825808 | Q012 | binary-next100-2026-11-05:Q012

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6360313267877840512. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): No orbital period, eclipse depth or source-specific geometry is measured from these troughs. This does not exclude a different binary signal.

Dated report next check: Characterize the smooth short-timescale variability separately if scientifically useful.

Full report and deciding evidence

TIC 220454593 | Q013 | binary-next100-2026-11-05:Q013

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 4764097507067304320. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): This is a refutation of selected windows, not a proof that the target cannot eclipse at some other time. No reliable eclipse clock is measured.

Dated report next check: Only revisit with a reduction that stabilizes orbit edges and yields repeated isolated shapes.

Full report and deciding evidence

TIC 409934046 | Q014 | binary-next100-2026-11-05:Q014

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6422351841382401280. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): No source-specific eclipse timing or geometry exists for these flags; no global binary exclusion is inferred.

Dated report next check: If revisited, compare background and detector systematics on the same cadences before timing any putative event.

Full report and deciding evidence

TIC 352610732 | Q015 | binary-next100-2026-11-05:Q015

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 2185088771042307328. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The contaminant's unique orbital period and catalogue novelty are unestablished. The result does not exclude separate variability of the queued target.

Dated report next check: Review Gaia DR3 2186586958712163712 as its own source using a centered aperture and source-specific catalogue checks.

Full report and deciding evidence

TIC 375301555 | Q016 | binary-next100-2026-11-05:Q016

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6444729376908350080. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): No reliable target eclipse clock follows from these flags; unrelated binarity remains possible.

Dated report next check: Revisit only if a stable reduction yields a target-centered repeated narrow loss.

Full report and deciding evidence

TIC 288055150 | Q017 | binary-next100-2026-11-05:Q017

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 1829957441685882752. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): No physically meaningful depth or eclipse epoch can be extracted from these segments; this does not exclude a different binary signal.

Dated report next check: Check a stable independent photometric reduction before considering any eclipse timing.

Full report and deciding evidence

TIC 200436851 | Q018 | binary-next100-2026-11-05:Q018

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 4790614940094627328. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): No secure eclipse period, depth or source-specific geometry is measured; a different binary signal is not excluded.

Dated report next check: Study the continuum variability separately; seek a narrow repeated loss before an eclipse classification.

Full report and deciding evidence

TIC 278955254 | Q019 | binary-next100-2026-11-05:Q019

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5496923450089762304. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): No reliable clock or depth is established from these flags; this does not rule out another binary event.

Dated report next check: Use a stable local background/reduction before considering a new repeated-event claim.

Full report and deciding evidence

TIC 236899970 | Q020 | binary-next100-2026-11-05:Q020

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 2244570219794054144. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The numerous flags do not give a physical clock or depth; this does not globally exclude binarity.

Dated report next check: Revisit only with consistent background removal and target-centered repeated residuals.

Full report and deciding evidence

TIC 41531803 | Q021 | binary-next100-2026-11-05:Q021

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5278734094937988864. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): An isolated real dip elsewhere is not excluded. The S62 trough alone cannot establish an orbit.

Dated report next check: Find a complete, target-centered dip in an independent sector.

Full report and deciding evidence

TIC 411086700 | Q022 | binary-next100-2026-11-05:Q022

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5361519108534141312. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The selected eclipse interpretation is refuted by the oscillatory context; the underlying variability is physically interesting and may be stellar pulsation or rotation.

Dated report next check: Characterize the oscillation spectrum if desired; require an isolated eclipse core for an EB claim.

Full report and deciding evidence

TIC 79154285 | Q024 | binary-next100-2026-11-05:Q024

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6477294574860385536. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The selected signals do not establish source-specific eclipses. The large gap-edge fit is unusable as an eclipse depth.

Dated report next check: Look for a fully observed dip with both local baselines and valid source pixels.

Full report and deciding evidence

TIC 464656473 | Q026 | binary-next100-2026-11-05:Q026

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6638328081495096448. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Selected flags lack a reproducible isolated core. The fitted deep event and selected depths are not adopted.

Dated report next check: Require a full, source-specific dip with both baselines.

Full report and deciding evidence

TIC 231636563 | Q028 | binary-next100-2026-11-05:Q028

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6456696358385190912. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The selected-window verdict leaves unrelated variability unclassified. No fitted period or depth is adopted.

Dated report next check: Find an isolated full dip with consistent morphology and target-centered pixels.

Full report and deciding evidence

TIC 168657537 | Q029 | binary-next100-2026-11-05:Q029

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 4883891772815552000. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The selected target-associated EB interpretation is refuted by positive spatial attribution to a different star. The neighbor may itself be an EB: odd/even depth differences of about 0.2-0.3 ppt recur in all three sectors, with exploratory sector-stratified permutation p≈0.016. A 1P transiting body remains possible, and aperture dilution limits companion sizing. The selected TIC radius is 2.294 solar radii, but it does not apply to the eclipsed neighbor.

Dated report next check: Analyze source-resolved neighbor photometry to distinguish 1.96345-d transits from 3.9269-d alternating eclipses; review the selected Gaia SB1 separately for its own orbital eclipses.

Full report and deciding evidence

TIC 404162889 | Q030 | binary-next100-2026-11-05:Q030

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6671273165012162432. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): This refutes the selected bulk flags as binary evidence, not every possible variability signal from the star.

Dated report next check: Seek a complete target-localized raw dip in a separate observing occasion.

Full report and deciding evidence

TIC 392756553 | Q032 | binary-next100-2026-11-05:Q032

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6371362573758587392. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Refutes the selected eclipse interpretation, not the possibility of a separate binary signal elsewhere in the target light curve.

Dated report next check: Require a fully observed isolated trough in another sector before reopening an eclipse claim.

Full report and deciding evidence

TIC 231632756 | Q033 | binary-next100-2026-11-05:Q033

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6453076177694232320. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Other low-amplitude stellar variability may coexist with the documented gap/step artifacts.

Dated report next check: Find an event with continuous ingress, core, egress, and two-sided baseline.

Full report and deciding evidence

TIC 309145061 | Q034 | binary-next100-2026-11-05:Q034

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5276465493208393088. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The diagnostics refute these selected windows as an eclipse train; they do not rule out a separate weak binary signal.

Dated report next check: Review a fully covered event away from segment boundaries with target-centered pixels.

Full report and deciding evidence

TIC 300557107 | Q035 | binary-next100-2026-11-05:Q035

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5264513045897554560. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): A smaller isolated event may be hidden under the substantial sector-to-sector variability; the refutation is of the selected repeat-sector evidence.

Dated report next check: Search for a complete event in a stable segment, then assess spatial ownership.

Full report and deciding evidence

TIC 250561084 | Q036 | binary-next100-2026-11-05:Q036

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 3585269348175726O8. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The ~6.1464 d period and ~10 ppt depth describe the off-target lead and are omitted from the queued target RESULTS fields. Target and neighbor are separated by ~1.4 TESS pixels; PRF overlap and similar S18/S85 WCS orientation limit precision localization, but both corrected maps and disjoint aperture strips favor the neighbor. One S85 event lies close to a gap, and local Gaussian timing is diagnostic; no precision period uncertainty is supplied. This does not exclude unrelated binarity of TIC 250561084.

Dated report next check: Review Gaia DR3 3585277895136143 36 as a separate eclipsing object and obtain a resolved next event.

Full report and deciding evidence

TIC 79305421 | Q037 | binary-next100-2026-11-05:Q037

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6463641079984637440. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): An unflagged independent eclipse elsewhere is not excluded.

Dated report next check: Require an isolated two-sided event with a valid target-centered extraction.

Full report and deciding evidence

TIC 351554371 | Q038 | binary-next100-2026-11-05:Q038

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6453957200043450880. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The selected eclipse interpretation is refuted; unrelated low-level astrophysical variability is unresolved.

Dated report next check: Use an independent continuous eclipse profile before assigning a binary period.

Full report and deciding evidence

TIC 277031573 | Q039 | binary-next100-2026-11-05:Q039

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6363736734768929536. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): A separate weak eclipse is not disproved; the selected detector windows are inadequate.

Dated report next check: Obtain complete ingress/core/egress away from the observed gaps.

Full report and deciding evidence

TIC 233301662 | Q040 | binary-next100-2026-11-05:Q040

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 2185777855590109312. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The mechanism of the smooth SAP modulation is unresolved; broad eclipses beneath it are not mathematically excluded. This verdict refutes the selected repeat-dip evidence only.

Dated report next check: Check independent reductions and pixels for the broad modulation; revisit residuals if an isolated eclipse appears.

Full report and deciding evidence

TIC 352354421 | Q041 | binary-next100-2026-11-05:Q041

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6422150355876758144. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): A residual sub-ppt intrinsic component cannot be excluded. This verdict refutes selected dip evidence, not every possible binary signal.

Dated report next check: Revisit only if resolved motion-corrected photometry shows repeated target-centered losses.

Full report and deciding evidence

TIC 350584814 | Q042 | binary-next100-2026-11-05:Q042

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 4765862803050039808. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The star is variable; this review does not identify the cause or exclude all binary configurations.

Dated report next check: Characterize the short-period wave separately if useful.

Full report and deciding evidence

TIC 240178796 | Q045 | binary-next100-2026-11-05:Q045

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 2128271129715505280. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Only the selected eclipse interpretation is refuted; other variability or binary behavior is untested.

Dated report next check: Reassess if an independent reduction yields repeated isolated target-centered dips.

Full report and deciding evidence

TIC 435233120 | Q048 | binary-next100-2026-11-05:Q048

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 2814245885839871232. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The review refutes these two screening dips, without excluding a different binary signal.

Dated report next check: Revisit only if another reduction reveals repeated closed occultations.

Full report and deciding evidence

TIC 401705078 | Q049 | binary-next100-2026-11-05:Q049

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6355475008694387584. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Coincident timing alone is not the veto; the local gap/step and slope morphology refute the selected feature. This does not exclude all binary behavior.

Dated report next check: Only revisit with a spatially resolved, continuous light curve showing repeat eclipses.

Full report and deciding evidence

TIC 176051632 | Q050 | binary-next100-2026-11-05:Q050

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5714720447099049344. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): A capable G15.45 star 6.47 arcsec away and a brighter G10.85 star 66.8 arcsec away complicate ownership of the wave. This refutes the selected long-period eclipse interpretation, not all possible short-period binary or variable behavior.

Dated report next check: Identify the source and physical nature of the rapid variability with resolved photometry if useful.

Full report and deciding evidence

TIC 409938734 | Q052 | binary-next100-2026-11-05:Q052

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6425798260580188160. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Refutes the selected repeat-sector eclipse evidence; a separate weak signal elsewhere is not excluded.

Dated report next check: Require a fully observed isolated ingress, core, egress and source-localized loss.

Full report and deciding evidence

TIC 325338671 | Q053 | binary-next100-2026-11-05:Q053

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6382954553051745664. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The selected eclipse interpretation is refuted; low-amplitude unrelated variability remains possible.

Dated report next check: Seek an isolated full event away from shared segment boundaries.

Full report and deciding evidence

TIC 108655701 | Q054 | binary-next100-2026-11-05:Q054

Included claim: False. **Novelty decision:** known_prior_recovery. Gaia DR3: 5611909581558507648. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): These windows do not demonstrate eclipses; the origin of the broad modulation is not established by these same-photon reductions.

Dated report next check: Characterize the modulation with independent pixel extraction if its variable-star nature is of interest.

Full report and deciding evidence

TIC 158235054 | Q055 | binary-next100-2026-11-05:Q055

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6644458412873913472. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Refutes the selected repeat-sector claim, not all possible low-amplitude variability.

Dated report next check: Find a clean full eclipse away from a segment break before source attribution.

Full report and deciding evidence

TIC 346727714 | Q056 | binary-next100-2026-11-05:Q056

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6347482040197122176. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Selected-window refutation leaves any independent weak event untested.

Dated report next check: Require a continuous full event, then compare source-resolved pixels.

Full report and deciding evidence

TIC 399951126 | Q057 | binary-next100-2026-11-05:Q057

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 2132809192158414464. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The selected eclipse interpretation is refuted. The broad modulation itself may be intrinsic or extraction-related and is not classified further here.

Dated report next check: Use independent target-centered pixels to determine the broad-wave source before any variable-star classification.

Full report and deciding evidence

TIC 469821735 | Q058 | binary-next100-2026-11-05:Q058

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6367683264255554304. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Refutes the selected repeat-sector morphology; no source claim follows from the blended aperture.

Dated report next check: Find two complete matching events before timing and source tests.

Full report and deciding evidence

TIC 278271047 | Q059 | binary-next100-2026-11-05:Q059

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5206780095504542592. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Selected-window refutation does not rule out a separate weak binary signal.

Dated report next check: Obtain another clean isolated event with full local cadence coverage.

Full report and deciding evidence

TIC 161168392 | Q060 | binary-next100-2026-11-05:Q060

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6516907298748889856. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The selected eclipse claim is refuted; smooth variability has no secure physical classification from these reductions.

Dated report next check: Seek a complete isolated profile away from gaps with independent pixel evidence.

Full report and deciding evidence

TIC 25194865 | Q063 | binary-next100-2026-11-05:Q063

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 4668891138816243200. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): This refutes the selected repeat-sector eclipse interpretation, not the existence of stellar variability or every possible weak eclipse.

Dated report next check: Characterize the broad variability with an independent target-centered extraction if its source is of interest.

Full report and deciding evidence

TIC 339768963 | Q064 | binary-next100-2026-11-05:Q064

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5486327937570742016. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The selected morphology is refuted; a separate low-amplitude event elsewhere is not excluded.

Dated report next check: Seek a continuous isolated ingress, bottom, and egress before timing or source attribution.

Full report and deciding evidence

TIC 312243976 | Q065 | binary-next100-2026-11-05:Q065

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 2060747097020620672. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The variable-star mechanism and source attribution are not fixed by these light curves. This refutes the selected eclipse interpretation only.

Dated report next check: Use independent extraction and frequency analysis if the non-eclipse variability is to be classified.

Full report and deciding evidence

TIC 341403511 | Q066 | binary-next100-2026-11-05:Q066

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6452661700467339264. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The selected repeat-sector evidence is refuted; unrelated variability remains possible.

Dated report next check: Require a fully observed event away from segment boundaries, then independent pixels.

Full report and deciding evidence

TIC 63121270 | Q069 | binary-next100-2026-11-05:Q069

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 2125723041576556288. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The selected eclipse interpretation is refuted; the large-amplitude variability remains an interesting separate classification problem.

Dated report next check: Use independent aperture photometry to classify the strong variable signal.

Full report and deciding evidence

TIC 401575160 | Q070 | binary-next100-2026-11-05:Q070

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6368617127584372096. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The selected eclipse interpretation is refuted; the origin of broad trends remains unassigned.

Dated report next check: Require a complete isolated profile with stable baseline and repeat timing.

Full report and deciding evidence

TIC 245641254 | Q071 | binary-next100-2026-11-05:Q071

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 4547021789766369 28. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): This refutes the selected repeat-sector eclipse interpretation, not all possible low-level variability.

Dated report next check: A clean isolated dip with a stable baseline and repeated same-kind timing would reopen the target.

Full report and deciding evidence

TIC 125399033 | Q072 | binary-next100-2026-11-05:Q072

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 1967303589485512704. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The selected eclipse evidence is refuted; the star can remain a genuine non-eclipse variable.

Dated report next check: Use independent high-cadence photometry if a narrow eclipse under the large waves is suspected.

Full report and deciding evidence

TIC 243911462 | Q073 | binary-next100-2026-11-05:Q073

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 4222432621294412160. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The positive step/gap evidence refutes the selected eclipse windows.

Dated report next check: Require a complete symmetric event independent of the segment steps.

Full report and deciding evidence

TIC 277069038 | Q074 | binary-next100-2026-11-05:Q074

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6363757389269169536. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The identified detector-edge windows are refuted as evidence of an eclipse; weak unrelated events are not excluded.

Dated report next check: Obtain a complete event with covered core, both baselines and target-centered pixel loss.

Full report and deciding evidence

TIC 167549256 | Q076 | binary-next100-2026-11-05:Q076

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5478714919059036032. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The selected flags do not establish a binary eclipse.

Dated report next check: Seek complete raw dips in independent sectors, then test source pixels and aliases.

Full report and deciding evidence

TIC 270523058 | Q077 | binary-next100-2026-11-05:Q077

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 2126300907958489216. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The target may be binary spectroscopically; this refutes assignment of the short-period eclipses to it.

Dated report next check: Preserve the neighbor as a separate known EB and seek target-only photometry for the 30.03-d orbit.

Full report and deciding evidence

TIC 410117870 | Q081 | binary-next100-2026-11-05:Q081

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6397268064141356544. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): This refutes the selected repeat-sector eclipse interpretation; it does not exclude every weaker eclipse elsewhere. Novelty gates remain unresolved.

Dated report next check: Require a fully sampled isolated repeat outside shared spacecraft events before reconsidering the source.

Full report and deciding evidence

TIC 210963066 | Q082 | binary-next100-2026-11-05:Q082

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5866918974111662848. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The selected repeat-sector eclipse claim is refuted; the physical source of smooth variability remains unresolved. Novelty gates remain unresolved.

Dated report next check: If the broad variability is of interest, obtain an independently localized light curve with continuous coverage across a full cycle.

Full report and deciding evidence

TIC 350091478 | Q084 | binary-next100-2026-11-05:Q084

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5292338352301865216. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The selected eclipse flags are refuted; unrelated faint eclipses are not excluded. Novelty gates remain unresolved.

Dated report next check: Revisit only if a full isolated event with repeat and stable baseline appears.

Full report and deciding evidence

TIC 316880689 | Q085 | binary-next100-2026-11-05:Q085

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6459054913905669760. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): This rejects the selected repeat-sector eclipse interpretation, not all possible stellar variability. Novelty gates remain unresolved.

Dated report next check: Characterize the broad wave separately if scientifically useful; require a distinct fully covered repeated eclipse for an EB claim.

Full report and deciding evidence

TIC 74352282 | Q086 | binary-next100-2026-11-05:Q086

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5919492461866597248. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The selected repeat-sector eclipse interpretation is refuted; no inference is made about every possible weak event. Novelty gates remain unresolved.

Dated report next check: Seek a complete isolated ingress-bottom-egress profile and a second observing occasion.

Full report and deciding evidence

TIC 446548691 | Q087 | binary-next100-2026-11-05:Q087

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6632594781191018368. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): This is a refutation of the selected eclipse interpretation, not a proof that the star lacks any eclipse. Novelty gates remain unresolved.

Dated report next check: Acquire a fully covered repeat isolated from common spacecraft events.

Full report and deciding evidence

TIC 238195128 | Q088 | binary-next100-2026-11-05:Q088

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 4626953841187131136. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The selected repeat-sector eclipse evidence is refuted; this does not set a sensitive limit on all possible eclipses. Novelty gates remain unresolved.

Dated report next check: Follow a newly observed, isolated complete trough with a second occurrence and pixel localization.

Full report and deciding evidence

TIC 382040915 | Q089 | binary-next100-2026-11-05:Q089

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6419954356278834176. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): This refutes the selected repeat-sector eclipse interpretation and the inspected S67 exception; unseen weaker events remain outside this bounded review. Novelty gates remain unresolved.

Dated report next check: Require a clean isolated eclipse outside shared camera/systematic features before source attribution.

Full report and deciding evidence

TIC 243276811 | Q090 | binary-next100-2026-11-05:Q090

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 2143064916926398848. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The selected flags are instrumental/common-mode dominated; weaker independent binary behavior is not excluded. Novelty gates remain unresolved.

Dated report next check: If the target is pursued, obtain independent high-resolution photometry spanning more than one sector with stable instrument baseline.

Full report and deciding evidence

TIC 40970982 | Q091 | binary-next100-2026-11-05:Q091

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 4658769687633857664. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Selected multi-sector dips are explained by broad trends and gap interruptions; this does not exclude an unobserved weaker binary eclipse. Catalogue novelty remains unknown.

Dated report next check: Seek a complete isolated repeated event with a stable local baseline.

Full report and deciding evidence

TIC 322617660 | Q092 | binary-next100-2026-11-05:Q092

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5864546021863527552. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The selected repeat-sector interpretation fails on raw morphology; a weaker event elsewhere is not ruled out. Catalogue novelty remains unknown.

Dated report next check: Obtain a complete isolated dip and an independently repeated occurrence.

Full report and deciding evidence

TIC 341005134 | Q098 | binary-next100-2026-11-05:Q098

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6453851509487595008. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The selected flags are explained by interrupted baseline/systematic structures, without ruling out weaker unseen eclipses. Catalogue novelty remains unknown.

Dated report next check: Seek a complete repeat away from spacecraft gaps.

Full report and deciding evidence

TIC 340968888 | Q099 | binary-next100-2026-11-05:Q099

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6426322452748867456. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The selected repeat interpretation is refuted by gap and reset morphology; weaker independent events are not excluded. Catalogue novelty remains unknown.

Dated report next check: Seek a complete repeat away from gap resets.

Full report and deciding evidence

TIC 255546587 | Q100 | binary-next100-2026-11-05:Q100

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5499860245647258368. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The selected flags are better explained by baseline changes and shared interrupted structure; weaker independent events remain possible. Catalogue novelty remains unknown.

Dated report next check: Seek an isolated complete repeat outside the shared structure.

Full report and deciding evidence

TIC 259900992 | V001 | V001

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 4644226103707561984. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The selected troughs are rejected; independent target variability is not excluded.

Dated report next check: Check target-centered valid difference pixels if an independent candidate emerges.

Full report and deciding evidence

TIC 265066551 | V002 | V002

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 2213231423984537472. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Refutes attribution of the giant short-period trough train to the selected Gaia target under ordinary throughput, while preserving the blended source as an interesting variable.

Dated report next check: Resolve the variable source and classify the short-period waveform.

Full report and deciding evidence

TIC 78053255 | V003 | V003

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 4826187409725215744. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Noise and oscillations limit shallow-event sensitivity; this is a refutation of the selected screening pattern, not proof of no binary.

Dated report next check: Use higher-resolution target-centered pixels if a specific new ephemeris is proposed.

Full report and deciding evidence

TIC 166563438 | V004 | V004

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6085864655805669120. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): A different real event in the target is not excluded by rejecting these detector windows.

Dated report next check: Inspect independent target-centered pixel extraction only if a clean raw repeat is found.

Full report and deciding evidence

TIC 306826020 | V005 | V005

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5274324915866445568. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Photometric modulation itself may be astrophysical; its mechanism and source are not determined here.

Dated report next check: Phase-fold and model the smooth variability separately if scientifically useful.

Full report and deciding evidence

TIC 389567330 | V006 | V006

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 4659975851879187840. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): A low-amplitude eclipse hidden beneath the variability is not excluded.

Dated report next check: Search residuals after a justified variability model only if a specific repeat is proposed.

Full report and deciding evidence

TIC 407622315 | V008 | V008

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 4652277311965454080. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Other variability on this target remains unclassified.

Dated report next check: If a different candidate event is found, obtain valid pixel-level source attribution.

Full report and deciding evidence

TIC 234302665 | V009 | V009

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 4693735050721713536. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Rejects these screened troughs as target-specific eclipses, while not ruling out unrelated binarity.

Dated report next check: Use target-centered difference pixels if a separate clean dip appears.

Full report and deciding evidence

TIC 232632979 | V010 | V010

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 1422829657649346688. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Variability could obscure a separate shallow eclipse; none is demonstrated by the selected pattern.

Dated report next check: Analyze the oscillation spectrum or residuals only for a separately motivated ephemeris.

Full report and deciding evidence

TIC 149252670 | V011 | V011

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 4759475022745893120. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The Gaia orbit may still be real spectroscopically; no target eclipse period, epoch, or depth is defensible.

Dated report next check: Seek a compact contact-bearing dip in independent target-centered pixels before reviving an eclipse interpretation.

Full report and deciding evidence

TIC 233055290 | V012 | V012

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 1436549501179799680. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): A shallow eclipse beneath the pulsations is not excluded by this bounded review.

Dated report next check: Remove the pulsation modes and require a repeat with distinct ingress and egress before pursuing a binary eclipse.

Full report and deciding evidence

TIC 237328956 | V013 | V013

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6393765638570124928. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): A tidal or pulsational interpretation is open; this result rejects the selected eclipse flags, not the Gaia SB2 orbit.

Dated report next check: Inspect independent high-resolution target-centered photometry only if a discrete residual dip is found.

Full report and deciding evidence

TIC 344584786 | V014 | V014

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6396325336000098432. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The shared event does not exclude unrelated target variability or the sparse S13 trough.

Dated report next check: Check the S13 event with target-centered pixels and seek another clean eclipse-like repeat.

Full report and deciding evidence

TIC 364181005 | V015 | V015

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 2275159492270440960. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Rejecting the screened eclipse interpretation does not refute the spectroscopic SB2.

Dated report next check: Model the broad orbital/stellar wave and inspect residuals for a separate reproducible occultation.

Full report and deciding evidence

TIC 410449401 | V016 | V016

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5290693654708705920. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The spatial check does not exclude independent target eclipses, so the conclusion is about the screened target eclipse claim.

Dated report next check: Use target and neighbor centered differential pixel photometry if an independent long-period dip appears.

Full report and deciding evidence

TIC 31531197 | V018 | V018

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 4657436117451600256. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Small hidden eclipses are not ruled out under the changing baseline.

Dated report next check: Model the broad wave and look for a separate repeated compact residual event.

Full report and deciding evidence

TIC 366103941 | V019 | V019

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 4310867651560569 60. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The existing rotation classifications and blended aperture do not exclude a faint separate eclipse.

Dated report next check: Resolve target and V1036 Cas with spatially separated photometry if a long-period residual survives.

Full report and deciding evidence

TIC 392025836 | V020 | V020

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 4621288332647589504. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): A low-amplitude eclipse hidden beneath pulsations remains untested.

Dated report next check: Prewhiten the pulsations and inspect only persistent compact residual dips.

Full report and deciding evidence

TIC 185744410 | X001 | X001

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5639516604842171904. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Exact contaminant identity and its eclipse period remain unmeasured; G-cone failures are not nonmatches.

Dated report next check: Identify the displaced variable and extract its own aperture.

Full report and deciding evidence

TIC 149316567 | X002 | X002

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5594910169717657216. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Contaminant identity remains unknown; local branch slopes 7.08079/7.08517 d are descriptive, not precision ephemerides.

Dated report next check: Locate the displaced EB and fit same-kind timings over the real baseline.

Full report and deciding evidence

TIC 152873785 | X005 | X005

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5597699566303658624. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): This refutes only the selected dip interpretation; smooth variation, including possible tidal/heartbeat activity, may be astrophysical. Another hidden binary is not excluded.

Dated report next check: Model the smooth variability before making any eclipse search or orbital association.

Full report and deciding evidence

TIC 149465897 | X006 | X006

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5587674528514689024. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Shallow eclipses could be buried under the waves; a smooth or heartbeat-like signal alone is not a probable eclipsing binary. Only this selected pattern is refuted.

Dated report next check: Use a variability model and targeted photometry if a residual eclipse remains.

Full report and deciding evidence

TIC 364537492 | X009 | X009

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 4624516876743983360. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): No stable eclipse clock has been established. Only the selected dip pattern is refuted; a separate weak binary remains possible.

Dated report next check: Model oscillations and recheck residuals if the object is scientifically useful.

Full report and deciding evidence

TIC 387124290 | X010 | X010

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 1807417487674292224. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Exact contaminant and its full orbital period remain unknown; doubled period may apply if alternate depths are different kinds. Other hidden target eclipses are not excluded.

Dated report next check: Identify the displaced EB and inspect its own aperture.

Full report and deciding evidence

Non-eclipse variables (5)

TIC 95924853 | H081 | binary-review100-2026-11-04:H081

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5922002715631296512. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Short-sector modulation is evident in SAP; physical class and exact source remain unresolved. Corrected-flux suppression and centroid shifts alone do not localize it.

Dated report next check: Independent aperture and difference imaging if the modulation is pursued.

Full report and deciding evidence

TIC 147473756 | H083 | binary-review100-2026-11-04:H083

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 1043537002634418432. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Quasi-periodic non-eclipse modulation is clear; its coherence, physical class and aperture source are not established. The 34.337 d Gaia SB2 orbit is context only.

Dated report next check: Source-localized aperture photometry and longer-baseline mode analysis.

Full report and deciding evidence

TIC 52152553 | H085 | binary-review100-2026-11-04:H085

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 4687637876494156928. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Strong non-eclipse variability is present in the aperture; subtype and varying Gaia source remain unresolved. KSPSAP suppression and small centroid offsets are not source proof.

Dated report next check: Difference imaging or stable alternate-aperture photometry to localize the 3.06 d signal.

Full report and deciding evidence

TIC 433693445 | H087 | binary-review100-2026-11-04:H087

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 2211707771448719232. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The target-centered excess supports non-eclipse variability consistent with a stellar flare, but same-sector pixels cannot resolve a subpixel blend or prove flare physics. The image moment is descriptive, not a fitted PSF position. KSPSAP uses the same exposures. No orbital timing inference.

Dated report next check: Higher resolution source photometry if the flare source matters.

Full report and deciding evidence

TIC 51223058 | Q067 | binary-next100-2026-11-05:Q067

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 1808373856612878464. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The positive non-eclipse classification recovers prior heartbeat H1 in the existing paper rather than claiming a new variable; no isolated eclipse is supported at the selected depth. EB novelty remains separate from that heartbeat result.

Dated report next check: Retain as heartbeat H1 in the non-eclipse catalogue; no new EB claim.

Full report and deciding evidence

Unresolved (5)

TIC 155173365 | H082 | binary-review100-2026-11-04:H082

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 1936432670225676288. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): A flare-like positive event is present in SAP, but its source and whether it is stellar are insecure. No eclipse period is measured.

Dated report next check: Inspect pixel-level difference image and nearby light curves for the sector-84 impulse.

Full report and deciding evidence

TIC 43868028 | H084 | binary-review100-2026-11-04:H084

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 3208563496094554240. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The sector-5 selected window is a slope false alarm. Sector-98 has an insecure transient: its dipole is consistent with pointing or background structure, yet simple unregistered difference imaging does not exclude concurrent stellar brightening.

Dated report next check: Registered image modeling or independent photometry of the sector-98 transient and recurring sector-scale ramp.

Full report and deciding evidence

TIC 146169279 | H088 | binary-review100-2026-11-04:H088

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5368027530167193856. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The gap hides part of the event, while the background change raises contamination as an alternative. Neither establishes that the pre-gap mound is instrumental. Its source and physical class remain insecure; no repeat period or eclipse interpretation is supported.

Dated report next check: Resolve the sector-90 mound with pixel photometry or an independent well-covered recurrence.

Full report and deciding evidence

TIC 58171740 | H089 | binary-review100-2026-11-04:H089

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 149900032284377856. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): A real aperture excursion is possible, but its stellar origin and classification are insecure. No eclipse interpretation or period is supported.

Dated report next check: Pixel-level source check for the sector-44 impulse.

Full report and deciding evidence

TIC 73312747 | H090 | binary-review100-2026-11-04:H090

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 1083946670591127808. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The two spikes need not be the same phenomenon or source. Neither is an eclipse and the long separation does not yield a measured recurrence period.

Dated report next check: Localize each impulse with image-level photometry before classifying them as stellar flares.

Full report and deciding evidence

Faint-band conjunction and raw-event follow-up

Confirmed (42)

TIC 26486304 | U005 | R772

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 2136228982558752768. Reported recurrence (days): 26.07966.

Dated report limitations (current inclusion decision above): The binary eclipse interpretation and target-region attribution satisfy this bounded review. TESS pixels do not uniquely exclude a very close unresolved blend.

Dated report next check: Fit both conjunction tracks jointly and obtain resolved imaging if available.

Full report and deciding evidence

TIC 356801225 | U006 | R773

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 4513913222577935872. Reported recurrence (days): 46.54777.

Dated report limitations (current inclusion decision above): Four target-region raw eclipses, independent reductions and compatible Gaia geometry satisfy the bounded physical classification. Close unresolved blends and detailed stellar parameters remain unmeasured. The distant cataloged EA is not this signal.

Dated report next check: Obtain resolved follow-up photometry and a formal joint RV/eclipsing fit.

Full report and deciding evidence

TIC 70554665 | Y003 | R779

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 4970149490807806720. Reported recurrence (days): 29.4224133.

Dated report limitations (current inclusion decision above): QLP timing model is approximate and same-photon independent extraction retains spacecraft background trends. No calibrated system-wide period uncertainty or unresolved-companion exclusion is claimed.

Dated report next check: Obtain a further eclipse with independent observing equipment and refine the ephemeris.

Full report and deciding evidence

TIC 111230893 | Y005 | R780

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 5604949883412428032. Reported recurrence (days): 21.69427377.

Dated report limitations (current inclusion decision above): The partial S88 event supplies no usable midpoint. Epoch-dependent instrumental timing offsets and dilution are not precision-calibrated.

Dated report next check: Measure another complete eclipse and refine the orbital ephemeris with radial velocities.

Full report and deciding evidence

TIC 140777703 | Y008 | R781

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 5522055988120224oo. Reported recurrence (days): 25.06751514.

Dated report limitations (current inclusion decision above): Two unresolved close Gaia neighbors are faint in G-band, but color-dependent dilution is not measured. TESSCut aperture background artifacts away from the eclipse remain; they do not replace the raw-SAP event evidence.

Dated report next check: Obtain a complete high-resolution eclipse and improve the ephemeris using the dense modern events.

Full report and deciding evidence

TIC 156747165 | Y009 | R782

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 4497613271900639360. Reported recurrence (days): 37.88714458.

Dated report limitations (current inclusion decision above): Deep-pair formal fit covariance has no residual degrees of freedom; no precision total period error is reported. Difference imaging needs removal of a nearly uniform background change, and close faint companions remain unresolved.

Dated report next check: Obtain another complete deep eclipse to improve the period and resolve small QLP timing systematics.

Full report and deciding evidence

TIC 159860053 | Y010 | R783

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 6586467386484245632. Reported recurrence (days): 23.964284059704607.

Dated report limitations (current inclusion decision above): S106 custom aperture has smooth baseline drift; local straight baseline and two-kind morphology are used. Covariance errors are conditional.

Dated report next check: Refine two-kind ephemeris with S106 and future Gaia orbit.

Full report and deciding evidence

TIC 162437782 | Y011 | R784

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 5374745202619704832. Reported recurrence (days): 37.5734885838788.

Dated report limitations (current inclusion decision above): Gaia period is37.72302d: photometric difference is1.96 Gaia formal sigma. Gaia conjunction covariance is broad; no precision orbital refinement is claimed.

Dated report next check: Later repeated events and revised spectroscopic orbit.

Full report and deciding evidence

TIC 277772867 | Y013 | R786

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 6390922060982433664. Reported recurrence (days): 22.508866511059374.

Dated report limitations (current inclusion decision above): QLP aperture dilution changes sector depths. Fit-boundary and singular/unusable events are omitted; no precise claim about the broad S101 trough.

Dated report next check: Characterize shallow conjunction and revised sector apertures.

Full report and deciding evidence

TIC 98160330 | Z007 | R793

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 5603463584206598784. Reported recurrence (days): 30.223445611.

Dated report limitations (current inclusion decision above): Period error is a conditional local covariance, not a calibrated total precision. TESS cannot exclude arbitrarily close companions; earliest30-minute timing has0.0127 d residual.

Dated report next check: Higher cadence primary/secondary timing and RV characterization.

Full report and deciding evidence

TIC 272726082 | Z106 | R795

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 2017370499986557056. Reported recurrence (days): 45.01584602398308.

Dated report limitations (current inclusion decision above): Cadence-floor local formal timing errors; representative-event review, not all-event precision modeling.

Dated report next check: Additional well-sampled eclipses can refine period and stellar geometry.

Full report and deciding evidence

TIC 233624506 | Z015 | R801

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 2253708741967579264. Reported recurrence (days): 29.006333136.

Dated report limitations (current inclusion decision above): No concrete capable catalogued neighbor found within60arcsec; the2.4arcsec neighbor would require about81.75 intrinsic fractional loss under the idealized flux approximation. Bandpass and throughput remain approximate and arbitrarily close companions cannot be excluded. S86 has a strong baseline discontinuity and is locally fitted.

Dated report next check: Resolve neighboring sources and obtain additional RV and two-kind timings.

Full report and deciding evidence

TIC 294833711 | Z110 | R802

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 5811982081764875392. Reported recurrence (days): 58.91714770674514.

Dated report limitations (current inclusion decision above): Local formal timing model; representative events rather than all-event precision characterization.

Dated report next check: Additional same-kind timings can refine period.

Full report and deciding evidence

TIC 317322586 | Z114 | R803

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 2231760497013084672. Reported recurrence (days): 34.76826217454243.

Dated report limitations (current inclusion decision above): Broad baseline variability and cadence-based timing floors; strongest representative eclipses used.

Dated report next check: Fit additional eclipse profiles if precision characterization is required.

Full report and deciding evidence

TIC 322438528 | Z116 | R804

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 2224597625432992000. Reported recurrence (days): 47.77993585032699.

Dated report limitations (current inclusion decision above): G-band contaminant capability is approximate; local formal timing errors include cadence floors in clock.

Dated report next check: More precise PRF photometry can refine depths.

Full report and deciding evidence

TIC 347159772 | Z117 | R805

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 4531227025992849920. Reported recurrence (days): 25.978027207342524.

Dated report limitations (current inclusion decision above): Initial S53 and S54 source cutouts unavailable at eclipse core; alternate S80 secondary source image succeeds. Close few-percent G-flux neighbors cannot straightforwardly supply250ppt primary loss.

Dated report next check: Improve primary eclipse photometry and passband-specific neighbor constraints.

Full report and deciding evidence

TIC 25073050 | Z019 | R806

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 4495351743976888192. Reported recurrence (days): 24.291620859.

Dated report limitations (current inclusion decision above): The clock has only one same-kind interval. The capable G12.52 neighbor25.07arcsec away is spatially distinguished: all three background-corrected deficit centroids stay0.085-0.234pixel from the target versus1.25-1.36pixels from that neighbor under varied windows. This empirical localization has no calibrated PRF astrometric uncertainty; bandpass and throughput are approximate. No precision long-baseline ephemeris is claimed. The deep event has a data gap truncating egress.

Dated report next check: Obtain another same-kind eclipse and source-resolved follow-up.

Full report and deciding evidence

TIC 355095704 | Z119 | R807

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 6774723186115387136. Reported recurrence (days): 43.30140711382584.

Dated report limitations (current inclusion decision above): Three resolved narrow eclipses in sectors 1,27,95, with a coherent 43.301407-d clock. Target-centered deficit offset 0.197 pixel and a same-photon custom aperture independently retains the eclipse; no capable Gaia neighbor within the bounded six-pixel audit. Source-specific Gaia conjunction residuals 0.86-2.13d are comparable to propagated 0.80-2.31d errors; period differs 0.82 nominal Gaia sigma.

Dated report next check: Further events can improve timing precision.

Full report and deciding evidence

TIC 357128110 | Z120 | R808

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 2150955733921826944. Reported recurrence (days): 58.23927799950002.

Dated report limitations (current inclusion decision above): Deep flat-bottomed eclipses recur in sectors82,84,86 at 58.239278d. Difference Gaussian is 0.039 pixel from target; custom aperture retains 137ppt eclipse. A capable distant Gaia neighbor is 5.86pixels away and inconsistent with centered source. Gaia period differs 1.04 sigma; conjunction displacement10.7d remains compatible with large propagated9.2d covariance uncertainty.

Dated report next check: Further cycles and spectroscopy can refine orbital association.

Full report and deciding evidence

TIC 381290484 | Z122 | R809

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 5807968138466675968. Reported recurrence (days): 52.648523416811734.

Dated report limitations (current inclusion decision above): Raw primary eclipses in sectors39,66,93 give52.648523d; opposite-conjunction eclipses in100,102 independently give52.647048d from same-kind midpoints. The latter rejects primary half-period and sparse integer aliases through actual covered nulls. Difference image in100 is0.106pixel from target and custom aperture retains66ppt. Capable neighbors at2.82 and4.11pixels are spatially inconsistent. Gaia period differs1.26sigma and covariance conjunction offsets0.59-1.58d remain near1.1-1.3 nominal sigma.

Dated report next check: Joint characterization may refine the two conjunction shapes and ephemeris.

Full report and deciding evidence

TIC 12319637 | E001 | R811

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 514772377553055104. Reported recurrence (days): 25.01270519965353.

Dated report limitations (current inclusion decision above): Longer-baseline timing can refine the bounded representative ephemeris.

Dated report next check: Longer-baseline timing can refine the bounded representative ephemeris.

Full report and deciding evidence

TIC 55662895 | E004 | R812

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 4665283533789578496. Reported recurrence (days): 36.97238821779973.

Dated report limitations (current inclusion decision above): Fit broader baseline and additional sectors to improve broad-eclipse midpoint precision.

Dated report next check: Fit broader baseline and additional sectors to improve broad-eclipse midpoint precision.

Full report and deciding evidence

TIC 141428309 | E005 | R813

Probable (28)

TIC 259614821 | U001 | R771

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 5800475623873553024. Reported recurrence (days): 23.20817.

Dated report limitations (current inclusion decision above): Gaia orbital association and close-source ownership remain unresolved.

Dated report next check: Obtain spatially resolved eclipse photometry and a covariance-aware Gaia conjunction comparison.

Full report and deciding evidence

TIC 86182628 | U004 | U004

Included claim: False. **Novelty decision:** known_prior_recovery. Gaia DR3: 3925963363993879552. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Real repeating two-kind eclipses are supported; exact cycle count and Gaia orbital association remain unresolved. Exact TIC is a known PRSA EB recovery, independent of this physical-period uncertainty.

Dated report next check: Obtain an intervening or newer event to eliminate integer aliases and refine Gaia conjunction timing.

Full report and deciding evidence

TIC 768070 | U009 | R774

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 4876816415491696512. Reported recurrence (days): 52.14781.

Dated report limitations (current inclusion decision above): Two full repeated events and a gap-truncated third support a real eclipsing source near the target. Close blending and the S98 background/reset prevent definitive source assignment and a precision long-baseline clock.

Dated report next check: Acquire further target-centered repeats and a spatially resolved source check; compare complete Gaia RV covariance with eclipse timing.

Full report and deciding evidence

TIC 22559994 | Y001 | R777

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 6131510399993965312. Reported recurrence (days): 47.1224986.

Dated report limitations (current inclusion decision above): Repeated target-region eclipses are secure. Gaia orbital association has persistent 2.2-2.8 local linear-sigma offsets, and a 94.245 d timing family remains. Close unresolved companions and changing dilution remain possible.

Dated report next check: Obtain a new resolved same-kind eclipse and radial velocities; test the 47/94 d orbital alternatives and Gaia epoch geometry.

Full report and deciding evidence

TIC 65684549 | Y002 | R778

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 4762026821789688832. Reported recurrence (days): 1.13719062.

Dated report limitations (current inclusion decision above): The 6.46 arcsec G=9.82 neighbor is 7.33 times the target G-band flux and easily capable of supplying the eclipse loss. TESS alone may not resolve which member is eclipsing. Gaia association fails. The separately extracted 3x3 aperture dilutes the train strongly in the bright blended PSF; small repeated deficits remain but do not discriminate ownership.

Dated report next check: Resolve target and 6.46 arcsec neighbor during one short-clock eclipse; determine which star owns the train and search that source's known-variable identity.

Full report and deciding evidence

TIC 167461087 | Y012 | R785

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 1968869706364127616. Reported recurrence (days): 1.4091780168701047.

Dated report limitations (current inclusion decision above): Quoted clock is event recurrence, not uniquely identified full binary orbital period. Similar-depth alternating eclipses cannot be ruled out.

Dated report next check: Odd/even morphology and spectroscopy to distinguish1.409/2.818d and potential hierarchy.

Full report and deciding evidence

TIC 436205524 | Y017 | R787

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 1832432270547998592. Reported recurrence (days): 23.402178400035588.

Dated report limitations (current inclusion decision above): Gaia23.371225d differs by3.46 formal sigma; source-specific conjunction residuals grow to3.301d with sigma0.993d. Real target eclipses are established, but spectroscopic association is not fully passed.

Dated report next check: Updated radial velocities/orbit to resolve Gaia discrepancy and physical hierarchy.

Full report and deciding evidence

TIC 1269035 | Z001 | R788

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 5645992831406897408. Reported recurrence (days): 20.484956792.

Dated report limitations (current inclusion decision above): Gaia association fails; close blend and eccentric geometry remain incomplete; broader events were not used as independent same-kind timing epochs. A flux-capable subpixel Gaia neighbor remains unresolved; selected host uncertain; root decides claim eligibility.

Dated report next check: Resolve close companions and fit both eclipse kinds independently.

Full report and deciding evidence

TIC 22210159 | Z002 | R789

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 6144678735362837376. Reported recurrence (days): 34.873694641.

Dated report limitations (current inclusion decision above): Gaia covariance is local linear and may understate orbit uncertainty; a wrong Gaia orbit or unresolved source remains possible; no independent eccentric solution is claimed.

Dated report next check: Obtain new RVs or published RV reanalysis and two-kind eclipse geometry.

Full report and deciding evidence

TIC 71295367 | Z004 | R790

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 1096049957152995328. Reported recurrence (days): 0.871083097.

Dated report limitations (current inclusion decision above): Orbital period versus alternating eclipse interval unresolved; no Gaia association or eccentricity claim; near blends remain bounded by pixel resolution. Gaia neighbor1096049201238750976 at9.21arcsec,G15.7005 is flux-capable and the deficit centroid lies toward it; selected host uncertain; no positive off-target identification.

Dated report next check: Fit odd/even events and both kinds and obtain short-period RVs.

Full report and deciding evidence

TIC 92872537 | Z005 | R791

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 6786929934144691328. Reported recurrence (days): 32.816227290.

Dated report limitations (current inclusion decision above): Period32.81623 d is a favored recurrence; double65.63248 d remains possible if the sampled events alternate kinds. S95 strong baseline slope means local fitting is essential. A flux-capable subpixel Gaia neighbor remains unresolved; selected host uncertain; root decides claim eligibility.

Dated report next check: Observe a repeat separating the32.816 and65.632 d alternatives; fit secondary geometry.

Full report and deciding evidence

TIC 95324628 | Z006 | R792

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 4239611700214875904. Reported recurrence (days): 10.356645350.

Dated report limitations (current inclusion decision above): No precise independent eccentric orbit; Gaia association fails. Exact-source external RV warning in arXiv2608.06453 says FEROS & RVs inconsistent with orbit; this weakens use of Gaia and is not prior EB evidence.

Dated report next check: Fit both kinds and obtain/reanalyse RVs at10.35665 d; verify the RV literature row.

Full report and deciding evidence

TIC 241100642 | Z103 | R794

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 359275560498692352. Reported recurrence (days): 44.25378578771851.

Dated report limitations (current inclusion decision above): Shallow event has a physically capable faint neighbor with0.0081 target G flux at0.86pixel; deciding centroid favors target but no calibrated source-discriminating PRF uncertainty test excludes it. HOST_UNCERTAIN. Timing error uses cadence/2 and0.002d floors, not calibrated posterior.

Dated report next check: Higher-SNR target PRF extraction could sharpen faint-neighbor attribution and period.

Full report and deciding evidence

TIC 271763138 | Z105 | Z105

Included claim: False. **Novelty decision:** known_prior_recovery. Gaia DR3: 2078018122568678272. Reported recurrence (days): 44.8273376035925.

Dated report limitations (current inclusion decision above): Gaia solution AstroSpectroSB1 has16parameter covariance and Thiele-Innes elements; SB1-only primitive intentionally skips it. Known recovery regardless physical tier.

Dated report next check: If precision characterization is needed, propagate full AstroSpectro covariance with correct parameter mapping.

Full report and deciding evidence

TIC 278185284 | Z107 | R796

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 4525746853876018304. Reported recurrence (days): 27.788909211822933.

Dated report limitations (current inclusion decision above): Full period versus half period remains unresolved; pipeline comparisons share TESS photons.

Dated report next check: Obtain/test a clean13.894d-interleaved predicted window.

Full report and deciding evidence

TIC 280692653 | Z108 | R797

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 490489564469187072. Reported recurrence (days): 54.97197625000774.

Dated report limitations (current inclusion decision above): Capable0.011relative G-flux neighbor0.63pixel away; target attribution favored but shallow event needs tighter PRF check. Unique orbit and Gaia association unresolved.

Dated report next check: Test half-period window; improve PRF source attribution and revisit Gaia orbit association.

Full report and deciding evidence

TIC 150606032 | Z010 | R798

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 5594800806969008896. Reported recurrence (days): 18.684576124.

Dated report limitations (current inclusion decision above): Shallow variable baseline, unresolved capable neighbor capacity, and imperfect eclipse clock prevent confirmation.

Dated report next check: Resolve neighbors and measure a new eclipse and both eclipse kinds.

Full report and deciding evidence

TIC 192831602 | Z012 | R799

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 4809169065671083264. Reported recurrence (days): 39.167169945.

Dated report limitations (current inclusion decision above): Close-neighbor capacity must be resolved to confirm ownership; independent extraction reuses the same photons.

Dated report next check: Resolve capable neighbors and obtain additional eclipse or RV measurements.

Full report and deciding evidence

TIC 218292999 | Z014 | R800

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 33692231730997120. Reported recurrence (days): 37.921288113.

Dated report limitations (current inclusion decision above): Capable unresolved neighbors remain a source-ownership limitation; no precision eccentric orbit is claimed.

Dated report next check: Resolve neighboring sources and fit both eclipse kinds with RVs.

Full report and deciding evidence

TIC 321797629 | Z115 | Z115

Included claim: False. **Novelty decision:** pending_source_attribution. Gaia DR3: 5863872845916469376. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): KNOWN_NEIGHBOR_OWNERSHIP_HOLD; true eclipse source and unique clock unresolved; Gaia association not established.

Dated report next check: Resolve target versus known EB with calibrated PRF source attribution or higher spatial resolution.

Full report and deciding evidence

TIC 418062110 | Z123 | R810

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 4124055914411235584. Reported recurrence (days): 26.073507579993162.

Dated report limitations (current inclusion decision above): Deep flat eclipses in sectors91,92 recur26.073508d apart. Covered predicted half-period/divisor repeats are absent; the representative source deficit is0.068pixel from target with143ppt custom-aperture loss, inconsistent with capable neighbors at>=2.59pixels. A shallow opposite eclipse is also visible in92. Repeated eclipses are robust; final physical tier is PROBABLE because Gaia-orbit association remains uncertain because photometric period differs3.71 nominal Gaia sigma and deep conjunction offset~5.5d is1.8 propagated sigma. The missing Gaia-compatible geometry check prevents CONFIRMED under Section2.7.

Dated report next check: Obtain another deep eclipse and update spectroscopy to resolve Gaia period tension.

Full report and deciding evidence

TIC 442807330 | Z126 | Z126

Included claim: False. **Novelty decision:** pending_source_attribution. Gaia DR3: 5863330614835331200. Reported recurrence (days): 2.315272755238139.

Dated report limitations (current inclusion decision above): Repeated resolved eclipses show2.315273d spacing and a robust same-photon alternative aperture. Source ownership is unresolved because known EB TIC442802434/Gaia5863330614835332608 (G13.148) lies4.927arcsec away, only0.24pixel, and is capable. Broad target-centered deficit cannot distinguish those sources. Mandatory known-neighbor ownership and novelty hold; no addition. Selected25.662d Gaia association is not established.

Dated report next check: Resolve target from the known capable EB with higher resolution and compare its published clock.

Full report and deciding evidence

TIC 149847663 | E008 | R814

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 5089212645744372992. Reported recurrence (days): 31.546877722293996.

Dated report limitations (current inclusion decision above): Revisit source-specific spectroscopic orbit/conjunction geometry; do not erase measured primary tension.

Dated report next check: Revisit source-specific spectroscopic orbit/conjunction geometry; do not erase measured primary tension.

Full report and deciding evidence

TIC 170402154 | E010 | R816

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 5562108100023118080. Reported recurrence (days): 37.21647641528023.

Dated report limitations (current inclusion decision above): Reconcile source-specific spectroscopic orbit/conjunction geometry with measured eclipse clock.

Dated report next check: Reconcile source-specific spectroscopic orbit/conjunction geometry with measured eclipse clock.

Full report and deciding evidence

TIC 232631356 | Z032 | R824

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 1418553760008251648. Reported recurrence (days): 43.639409777.

Dated report limitations (current inclusion decision above): S84 custom pixels recover a compact deficit near the target, supporting a probable target eclipse. Two capable faint neighbors about1.3-1.5pixels away remain an uncalibrated attribution limitation; no quantitative PRF/centroid significance is established. The0.000288d period error is formal conditional on the0.01d/event floor and adopted cycles, not calibrated long-term accuracy.

Dated report next check: Obtain another resolved eclipse and improve spatial/spectroscopic characterization.

Full report and deciding evidence

TIC 248308520 | Z130 | R826

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 4226656498288395136. Reported recurrence (days): 21.179806086.

Dated report limitations (current inclusion decision above): Only one same-kind interval and a truncated first ingress/baseline. The21.179806d period is approximate, with a heuristic0.02d allowance rather than calibrated error; no long-baseline precision ephemeris. Broad Gaia timing covariance7.45-7.52d allows the approximately4.3d nominal offset. Independent extraction confirms recurrence; close capable/approximately capable0.47pixel neighbor prevents definitive ownership.

Dated report next check: Observe another complete source-resolved eclipse and refine the approximate period.

Full report and deciding evidence

TIC 37951551 | RS002 | R827

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 3178691590530845184. Reported recurrence (days): 48.36513640435166.

Dated report limitations (current inclusion decision above): Retain shallow-event spatial systematics; obtain another orientation or higher-resolution attribution.

Dated report next check: Retain shallow-event spatial systematics; obtain another orientation or higher-resolution attribution.

Full report and deciding evidence

TIC 281540788 | RS013 | R833

Included claim: True. **Novelty decision:** new_claim. Gaia DR3: 4905403442934128256. Reported recurrence (days): 40.75489255006135.

Dated report limitations (current inclusion decision above): Obtain a revised RV orbit or independent spectroscopy; keep both eclipse kinds spatially checked and do not report Gaia geometry as passed.

Dated report next check: Obtain a revised RV orbit or independent spectroscopy; keep both eclipse kinds spatially checked and do not report Gaia geometry as passed.

Full report and deciding evidence

Plausible (40)

TIC 371856921 | U002 | U002

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 3940600303300942592. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Single event; no second sensitive QLP/TESSCut sector is currently available. Eclipse interpretation, source ownership and orbital cycle remain uncertain.

Dated report next check: Obtain another complete eclipse with source localization.

Full report and deciding evidence

TIC 343187602 | U008 | U008

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 2201238397831169280. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): One event with uncertain source and possible reduction/systematic alternative; recurrence and Gaia orbital link are unproven.

Dated report next check: Acquire a second uninterrupted event and a valid target-flux cutout for localization.

Full report and deciding evidence

TIC 93330962 | Y004 | Y004

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 2915827050713497216. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Single event; no established same-kind recurrence. Source attribution is less precise than for deep events. New S107 cutout has near-zero/no-stellar-PSF data and cannot act as a sensitive null. S108/S109 contain broad spacecraft-shaped variability; no convincing narrow repeat is established.

Dated report next check: Obtain a second complete narrow dip with source localization, then test integer cycles with actual coverage.

Full report and deciding evidence

TIC 332686088 | Y014 | Y014

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 410632546043387904. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Single event has no photometric period. Gaia410629595402430336 at2.1arcsec has approximate G fluxratio0.0887, sufficient to mimic the event and unresolved by TESS; localization is to the blend. Gaia conjunction residual2.934d versus linear sigma1.292d does not establish association.

Dated report next check: Resolve capable close neighbor and observe a same-kind repeat; do not freeze a Gaia-period ephemeris.

Full report and deciding evidence

TIC 34308477 | Z003 | Z003

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 3192336529831629056. Reported recurrence (days): 49.316775524.

Dated report limitations (current inclusion decision above): Only two same-kind occasions; many aliases remain. Gaia conjunction offsets2.406+-2.523 and4.176+-3.746 d are consistent but cannot select the clock alone.

Dated report next check: Acquire a predicted eclipse at a time separating49.3168 and competing integer aliases.

Full report and deciding evidence

TIC 238407344 | Z101 | Z101

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 2860943278543099648. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Only one credible target-localized event; S17 shallow morphology has baseline sensitivity; no eclipse-derived orbital period.

Dated report next check: Observe a same-kind repeat; test Gaia-predicted windows using a source aperture.

Full report and deciding evidence

TIC 16150832 | Z016 | Z016

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 715419235141516160. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Single low-amplitude sparse event; morphology, source attribution and Gaia association remain unestablished. This is a completed bounded review with a plausible outcome, not a counted repeated system.

Dated report next check: Obtain a new event with source-resolved photometry.

Full report and deciding evidence

TIC 284764266 | Z109 | Z109

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 669955803723072128. Reported recurrence (days): 26.106218890484804.

Dated report limitations (current inclusion decision above): Occultations are not established over rotational minima: only two broad same-kind losses, curved surroundings, exact prior ROT13.041d, half-period ambiguity and Gaia3.3sigma discrepancy. Spatial localization establishes source, not eclipse physics;2-event formal period precision is conditional.

Dated report next check: Measure another same-kind broad eclipse, discriminate half clock and reassess Gaia orbit.

Full report and deciding evidence

TIC 16807424 | Z017 | Z017

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 8141616628514161 92. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Only one credible low cluster. Its nearest source-specific Gaia conjunction is about17.16d away versus local covariance sigma1.64d; Gaia association is disfavored. A single event cannot establish a free eclipse clock.

Dated report next check: Obtain source-resolved recurrence and a new eclipse timing.

Full report and deciding evidence

TIC 21623270 | Z018 | Z018

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 1537048987126553088. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The low cluster is sparsely sampled. The nearest Gaia conjunction differs by7.15d versus local covariance sigma0.84d. No measured recurrence or target ownership is established.

Dated report next check: Repeat at a measured free period and resolve the spatial source.

Full report and deciding evidence

TIC 25796372 | Z020 | Z020

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 2808323293441490176. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Only one sector exists in the successful current availability check. Low contrast and smooth morphology prevent an eclipse or periodicity claim. The untrusted fit proxy is not a timing or independent geometry measurement.

Dated report next check: Obtain a sharp resolved ingress/egress or an independently measured repeat.

Full report and deciding evidence

TIC 41553596 | Z021 | Z021

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5887511864848376576. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): No eclipse clock was fitted from these unlike features. Treating1626.3 and2334.36 as29 cycles merely assumes an untested alias. The nearby VSX SR|M source24.54arcsec away is a variable contaminant, not an exact eclipsing identification.

Dated report next check: Measure recurrence with consistent morphology and spatially separate the nearby variable.

Full report and deciding evidence

TIC 47853068 | Z022 | Z022

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 2938670435574260352. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): No same-kind eclipse clock. Gaia-conjunction mismatch is about13.52d with local covariance sigma3.59d. NewS107–109 availability is explicitly investigated by the helper; a missing or noise-limited window is not a clean null.

Dated report next check: Obtain cleaner source-resolved event morphology and recurrence.

Full report and deciding evidence

TIC 86515505 | Z023 | Z023

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6720740601165257472. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The queue visual description of bounded recovery is not supported by the deciding raw mask. No measured eclipse center, period or duration is adopted. The geometry entry for this trial is only an unusable fit proxy.

Dated report next check: Observe a complete bounded event with source attribution and repeat timing.

Full report and deciding evidence

TIC 130609636 | Z024 | Z024

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 3696540882650364928. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): One partial event, no free recurrence period. The symmetric local fit is retained as an approximate shape proxy but excluded from usable precision timings. Gaia geometry is broadly compatible within uncertainty and is not an independent validation of a single event.

Dated report next check: Obtain another same-kind event and resolve the eclipsing source.

Full report and deciding evidence

TIC 437230472 | Z125 | Z125

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 3549439073100013312. Reported recurrence (days): 47.6373945993979.

Dated report limitations (current inclusion decision above): S9 andS100 contain genuine broad flat-bottomed losses, whileS63 is a step andS90 is sloped variability, excluded from eclipse timings. FreshS100 custom aperture retains47ppt and is0.082pixel from target. Two events2524.782d apart leave many tested integer-cycle alternatives;47.637395d is a conditional53-cycle example, not a resolved period. It differs strongly from47.189d Gaia orbit. Physical recurrence/association is unresolved despite credible morphology; not counted.

Dated report next check: Find a third same-kind eclipse to resolve integer aliases and Gaia association.

Full report and deciding evidence

TIC 144157102 | E006 | E006

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6147285123378224512. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Obtain another complete same-kind raw event to settle integer cycles; use source-specific Gaia only as an association guide.

Dated report next check: Obtain another complete same-kind raw event to settle integer cycles; use source-specific Gaia only as an association guide.

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6110086209770411264. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Another complete same-kind event is required; obtain usable later-sector stellar photometry and test integer cycles.

Dated report next check: Another complete same-kind event is required; obtain usable later-sector stellar photometry and test integer cycles.

Full report and deciding evidence

TIC 186165363 | Z029 | Z029

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 4259915041416135680. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): No same-kind repeat or free eclipse period. Broad Gaia timing consistency is not independent validation or target-ownership proof.

Dated report next check: Obtain another same-kind event with spatial attribution.

Full report and deciding evidence

TIC 202792620 | Z030 | Z030

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 416556890795889920. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): One credible candidate cluster, no established free clock or target ownership. Source-specific Gaia agreement is broad, not decisive.

Dated report next check: Obtain a clean repeat of consistent shape and resolve the host.

Full report and deciding evidence

TIC 231397862 | Z031 | Z031

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5615979767439300608. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): No measured same-kind recurrence. Gaia conjunction uncertainty is broad and consistency is not validation. Missing/noisy newer predictions are not clean nulls.

Dated report next check: Obtain source-resolved recurrence and a reliable eclipse clock.

Full report and deciding evidence

TIC 457228352 | Z127 | Z127

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 3237564901983551232. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Many integer-cycle clocks between5d and the711.34d event separation remain; narrow observing blocks do not decide them. Divisor tests refute some short aliases but do not establish uniqueness. The later event is10.80d from the nearest nominal Gaia conjunction versus local propagated sigma2.06d; source-orbit association is disfavored. Two-event resemblance alone cannot promote it.

Dated report next check: Measure another source-resolved eclipse and discriminate integer cycle counts.

Full report and deciding evidence

TIC 235650919 | Z129 | Z129

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 4529160253364608000. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): One credible local event; variable baseline and sparse cadence. Exact Gaia-period predictions fall in insufficiently covered windows; no measured free clock is available. Gaia geometry is compatible within broad covariance but does not establish recurrence or host.

Dated report next check: Obtain a second source-resolved event on a measured clock.

Full report and deciding evidence

TIC 252997246 | Z131 | Z131

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 1032601573518010496. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): One complete event and no measured period. Existing usable sectors supply no additional well-covered same-kind predicted eclipse under the selection clock. Gaia consistency within broad covariance is only compatibility, not proof.

Dated report next check: Observe a second complete event and establish its clock and source.

Full report and deciding evidence

TIC 403139386 | Z132 | Z132

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 256449374806957056. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Only one eclipse. The S19 cutout has no detectable stellar PSF and near-zero negative median pixels: its normalized aperture plot is invalid and cannot provide a null or recurrence. The attempt is explicitly unavailable/noise-limited. Gaia offset1.48d versus sigma1.96d is compatible but does not measure an orbital clock.

Dated report next check: Obtain another source-resolved deep event and discriminate free periods.

Full report and deciding evidence

TIC 97279198 | RS004 | RS004

Included claim: False. **Novelty decision:** pending_source_attribution. Gaia DR3: 5578452851469250944. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Resolve the off-target source with a wider field and a repeat image; do not count it as a new target eclipser.

Dated report next check: Resolve the off-target source with a wider field and a repeat image; do not count it as a new target eclipser.

Full report and deciding evidence

TIC 467460090 | RS020 | RS020

Included claim: False. **Novelty decision:** pending_source_attribution. Gaia DR3: 5337460282325263488. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Resolve source with pixel model/neighbor ephemeris; do not count target or neighbor as new addition.

Dated report next check: See full report for next discriminating check.

Full report and deciding evidence

TIC 15994632 | RS022 | RS022

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 2067298086055279488. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Find unflagged recurrent event and resolve bright-neighbor contamination before assigning physical target EB.

Dated report next check: See full report for next discriminating check.

Full report and deciding evidence

TIC 132999153 | RS023 | RS023

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 4308693775291068416. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Acquire unflagged independent occasion and pixel attribution.

Dated report next check: See full report for next discriminating check.

Full report and deciding evidence

TIC 257464332 | RS024 | RS024

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6421549163537155200. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Reinspect an unflagged event with complete shoulders and target pixel model; current target remains excluded.

Dated report next check: See full report for next discriminating check.

Full report and deciding evidence

TIC 296080348 | RS025 | RS025

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 4576363112180293504. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Repeat under clean observing conditions and recover complete ingress/egress and attribution.

Dated report next check: See full report for next discriminating check.

Full report and deciding evidence

TIC 352725084 | RS026 | RS026

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 2023283918354633344. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Single event; no measured clock or repeat.

Dated report next check: Single event; no measured clock or repeat.

Full report and deciding evidence

Refuted selected signals (25)

TIC 412521418 | U003 | U003

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5619683923342333440. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The selected dip interpretation as a target Gaia-binary eclipse is refuted; an unrelated weak target eclipse elsewhere is not excluded. The neighbor is a cataloged EB, not a new target discovery.

Dated report next check: If target-specific eclipses are sought, use higher-resolution photometry separated from TIC 412521403.

Full report and deciding evidence

TIC 331643517 | U007 | U007

Included claim: False. **Novelty decision:** known_prior_recovery. Gaia DR3: 1975255807333826432. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The selected dips are not evidence that the queued Gaia SB1 is eclipsing. The exact-target IJspeert catalogue row requires its own interpretation; this review does not refute an independent target eclipse below the contaminated signal.

Dated report next check: Separate both sources spatially and inspect the IJspeert target row and its underlying event train.

Full report and deciding evidence

TIC 122766753 | Y006 | Y006

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 201206229839110784. Reported recurrence (days): 2.20927657.

Dated report limitations (current inclusion decision above): REFUTED_SOURCE for the selected Gaia/TIC target. Four separate S59 event-local differences all peak at pixel (4,5); their centroids are approximately 0.04-0.20 pixel from Gaia DR3 2012063028564385 28 and about one pixel from the target. This repeated local PSF displacement is stronger evidence than an unresolved-blend possibility. The phase-stack image is structured and gives a conflicting centroid; because stacking spans variable backgrounds and broad baseline states, it is not accepted as a reliable localization and does not override four consistent clean local event differences. A calibrated PRF fit or second orientation could test this adjudication, but target attribution is refuted within the bounded representative evidence. The neighbor remains a separate characterization lead, with no independent source/novelty review or claim substituted into this queue.

Dated report next check: Perform a separate identity, catalogue and PRF/resolved-photometry review of neighbor Gaia DR3 2012063028564385 28; establish its true orbital period without silently relabeling the selected target.

Full report and deciding evidence

TIC 440995465 | Y018 | Y018

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5863670570085033216. Reported recurrence (days): 9.030317680028327.

Dated report limitations (current inclusion decision above): Exact contaminant identity remains blended at the7x7 edge. Gaia5863647102381592576 at64.8arcsec and x2.45,y0.29 is capable (G fluxratio0.1583), but attribution to this particular neighbor is not claimed.

Dated report next check: Larger cutout and contaminant-centered extraction; no selected-target EB claim.

Full report and deciding evidence

TIC 98941880 | Z008 | Z008

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 3487621819263620096. Reported recurrence (days): 4.397803495.

Dated report limitations (current inclusion decision above): The contaminating source is not identified here. The measured4.3978 d clock describes the aperture signal, not the selected Gaia star.

Dated report next check: Identify the southern eclipsing contaminant with Gaia-resolved or ground-based photometry.

Full report and deciding evidence

TIC 240615841 | Z102 | Z102

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 1973900899772254464. Reported recurrence (days): 14.925779621252332.

Dated report limitations (current inclusion decision above): Crowded field; true contaminating EB identity is not uniquely assigned here; neighbor QLP shares photons.

Dated report next check: Characterize contaminating source separately with PRF modeling or higher resolution; no substitution into target result.

Full report and deciding evidence

TIC 258216510 | Z104 | Z104

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 1757749833003161472. Reported recurrence (days): 4.124346572846539.

Dated report limitations (current inclusion decision above): Edge source centroid is truncated by11pixel cutout; true contaminant not assigned.

Dated report next check: Larger cutout and separate source identification if contaminant science is desired.

Full report and deciding evidence

TIC 157000271 | Z011 | Z011

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5564100037135889024. Reported recurrence (days): 17.629745370.

Dated report limitations (current inclusion decision above): The contaminating eclipsing source is not identified here. The aperture clock is not a period of the selected Gaia source.

Dated report next check: Identify and review the northern contaminant separately.

Full report and deciding evidence

TIC 198590540 | Z013 | Z013

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 2116010093296554240. Reported recurrence (days): 8.933048015.

Dated report limitations (current inclusion decision above): Contaminant identity and its novelty are unassigned. These are aperture-signal measurements only.

Dated report next check: Identify the bright neighboring eclipsing source separately.

Full report and deciding evidence

TIC 316514122 | Z113 | Z113

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 448454547745791744. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): True contaminant identity and exact alternating-conjunction clock not characterized; no new target claim.

Dated report next check: Identify contaminant separately using larger field and dedicated extraction.

Full report and deciding evidence

TIC 353624054 | Z118 | Z118

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 2005581059590846336. Reported recurrence (days): 7.667068786068292.

Dated report limitations (current inclusion decision above): Positive off-target eclipse deficit: Gaussian source 1.540 pixels from target, 0.126 pixels from plausible contaminant Gaia 2005581162670064512 (G13.526). Its 7.667069-d eclipse train is unrelated to the selected 34.896-d Gaia clock. Target eclipsing interpretation is refuted; the contaminating binary is not claimed as a new by-catch.

Dated report next check: Confirm exact contaminant identity with higher resolution if scientifically useful.

Full report and deciding evidence

TIC 371308305 | Z121 | Z121

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 2003601698136579200. Reported recurrence (days): 1.4087053661387579.

Dated report limitations (current inclusion decision above): Repeated narrow eclipses have a coherent 1.408705-d clock, incompatible with the selected43.570-d Gaia orbit. Difference Gaussian lies1.423pixels from target and0.135pixel from Gaia2003601698136576640 (G15.476), with another close faint source nearby. This is positive off-target evidence; exact contaminant identity remains bounded and no by-catch is counted.

Dated report next check: Resolve which faint neighbor owns the eclipse if useful.

Full report and deciding evidence

TIC 200925588 | E011 | E011

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 2246004743208039 68. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): A wider bounded cutout could identify the contaminating short-period source; no target addition is warranted.

Dated report next check: A wider bounded cutout could identify the contaminating short-period source; no target addition is warranted.

Full report and deciding evidence

TIC 319472502 | E014 | E014

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 2695803263479851904. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): A wider bounded cutout could identify contaminating source; do not count this target.

Dated report next check: A wider bounded cutout could identify contaminating source; do not count this target.

Full report and deciding evidence

TIC 325813358 | E016 | E016

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 4298325548109874304. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): New higher quality discrete-event evidence would be needed before further eclipse analysis.

Dated report next check: New higher quality discrete-event evidence would be needed before further eclipse analysis.

Full report and deciding evidence

TIC 309259409 | E032 | E032

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 3454971752759931136. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): A wider extraction or follow-up can classify the northern variable; do not count the selected target.

Dated report next check: A wider extraction or follow-up can classify the northern variable; do not count the selected target.

Full report and deciding evidence

TIC 338482866 | E033 | E033

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 4511191484606753920. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): A new genuinely discrete event could reopen eclipse review; broad variability alone does not justify a target eclipse claim.

Dated report next check: A new genuinely discrete event could reopen eclipse review; broad variability alone does not justify a target eclipse claim.

Full report and deciding evidence

TIC 165371357 | Z027 | Z027

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 1549762537000068608. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): This refutes the selected bounded-eclipse interpretation, not the existence of every possible eclipse in this spectroscopic binary. No valid recurrence timing.

Dated report next check: Follow up only a new complete bounded event.

Full report and deciding evidence

TIC 177791920 | Z028 | Z028

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 3052922338088729088. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Gap-edge and broad-trend morphology refutes the selected discrete-event interpretation. The queue visual label was historical triage, not a measurement.

Dated report next check: Require a complete bounded event away from gaps.

Full report and deciding evidence

TIC 15527953 | RS001 | RS001

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 6125690306996117504. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): No target claim; inspect target-specific residuals only if pursuing another signal.

Dated report next check: No target claim; inspect target-specific residuals only if pursuing another signal.

Full report and deciding evidence

TIC 93104494 | RS003 | RS003

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5113398813474650752. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): No claim from these features; obtain a genuinely resolved event before further eclipse characterization.

Dated report next check: No claim from these features; obtain a genuinely resolved event before further eclipse characterization.

Full report and deciding evidence

TIC 187242860 | RS010 | RS010

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 5635502902062072320. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): The neighboring eclipser may be characterized separately; no new target EB claim or target by-catch is established.

Dated report next check: The neighboring eclipser may be characterized separately; no new target EB claim or target by-catch is established.

Full report and deciding evidence

TIC 298092295 | RS014 | RS014

Included claim: False. **Novelty decision:** not_claim_eligible. Gaia DR3: 1665388584229668224. Reported recurrence (days): unresolved.

Dated report limitations (current inclusion decision above): Any future claim requires resolved bounded raw eclipses, demonstrated recurrence and source attribution.

Dated report next check: Any future claim requires resolved bounded raw eclipses, demonstrated recurrence and source attribution.

Full report and deciding evidence
